

The Highland Council Cumulative Landscape and Visual Assessment

Caithness Conclusions

- Study Area
- Conclusions**
- Areas where receptor sensitivity to potential cumulative effects is a limiting factor to further development
- Areas where additional development may give rise to the extension of cumulative effects in relation to existing and emerging development patterns
- Areas where cumulative effects could be limited by siting additional development in association with existing patterns of development
- Areas where additional development could be sited away from existing development patterns, with reduced potential for cumulative effects

Non Technical Note
This figure presents a graphical interpretation of the study conclusions, as set out in Section 10 of the report. This figure should not be relied upon without reference to the detailed recommendations set out in Section 10.
