

**Theoretical Visibility of
Turbines (150m tip height)
in the Caithness Study Area**

-  Study Area
-  15km Outer Study Area
-  25km Outer Study Area
-  35km Outer Study Area

Intervisibility

Non Technical Note

This figure illustrates the relative visibility of a grid of imaginary turbines, 150m in height, placed across the Caithness landscape, illustrating the locations where turbines would be most visible (red) and least visible (green). This map does not represent the visibility of any existing or proposed turbines. See paragraphs 2.9 and 2.10 of the report.

Technical Note:

This map assumes a 250m grid of (150m to tip) turbines **within the study area only**. Green indicates visibility of less turbines. Red indicates visibility of more turbines.

Visibility of these turbines are shown to the 35km outer study area. The unshaded areas of this map indicate no visibility of turbines in the study area.

Turbines of 150m in tip height were used to demonstrate theoretical visibility of the largest size category considered in the study, and is therefore representative of highest levels of theoretical visibility.
