

Position in Settlement Hierarchy	Small Village
2005 Estimated Population	300
Housing Completions 2000-2007	1
Primary School Capacity (Roll/Physical Capacity)	Not Applicable
Water Capacity (allocations versus capacity)	Limited Capacity
Sewerage Capacity (allocations versus capacity)	Capacity

Embo was a planned village with a coherent street structure, which can still be clearly seen in the original 5 streets of Fishertown. Embo was formerly a fishing village with its origins in the Bronze Age - a fine example of a burial cairn can be seen in the centre of the village - and which has been laid out in narrow lanes and rows of houses running parallel down to the beach. The settlement relies on commuting primarily for employment, although many trades work out of Embo.

Prospects

Embo’s attractive seaside setting, tourist facility, and commuting distance from Dornoch and Tain ensure a steady demand for housing in the area. This demand combined with a low level of new build housing has created pressures on the existing limited housing supply with high house prices and a significant waiting list for the available Council housing. The potential for a community land buyout is being pursued by the Embo Trust offering an opportunity for the re-establishment of crofts in the area offering economic, employment and housing opportunity for local people. Proposals centre on the creation of forest crofts at the Fourpenny Plantation; the provision of a masterplan indicating the scale and form of the initiative should be prepared by the community trust to inform forthcoming proposals.

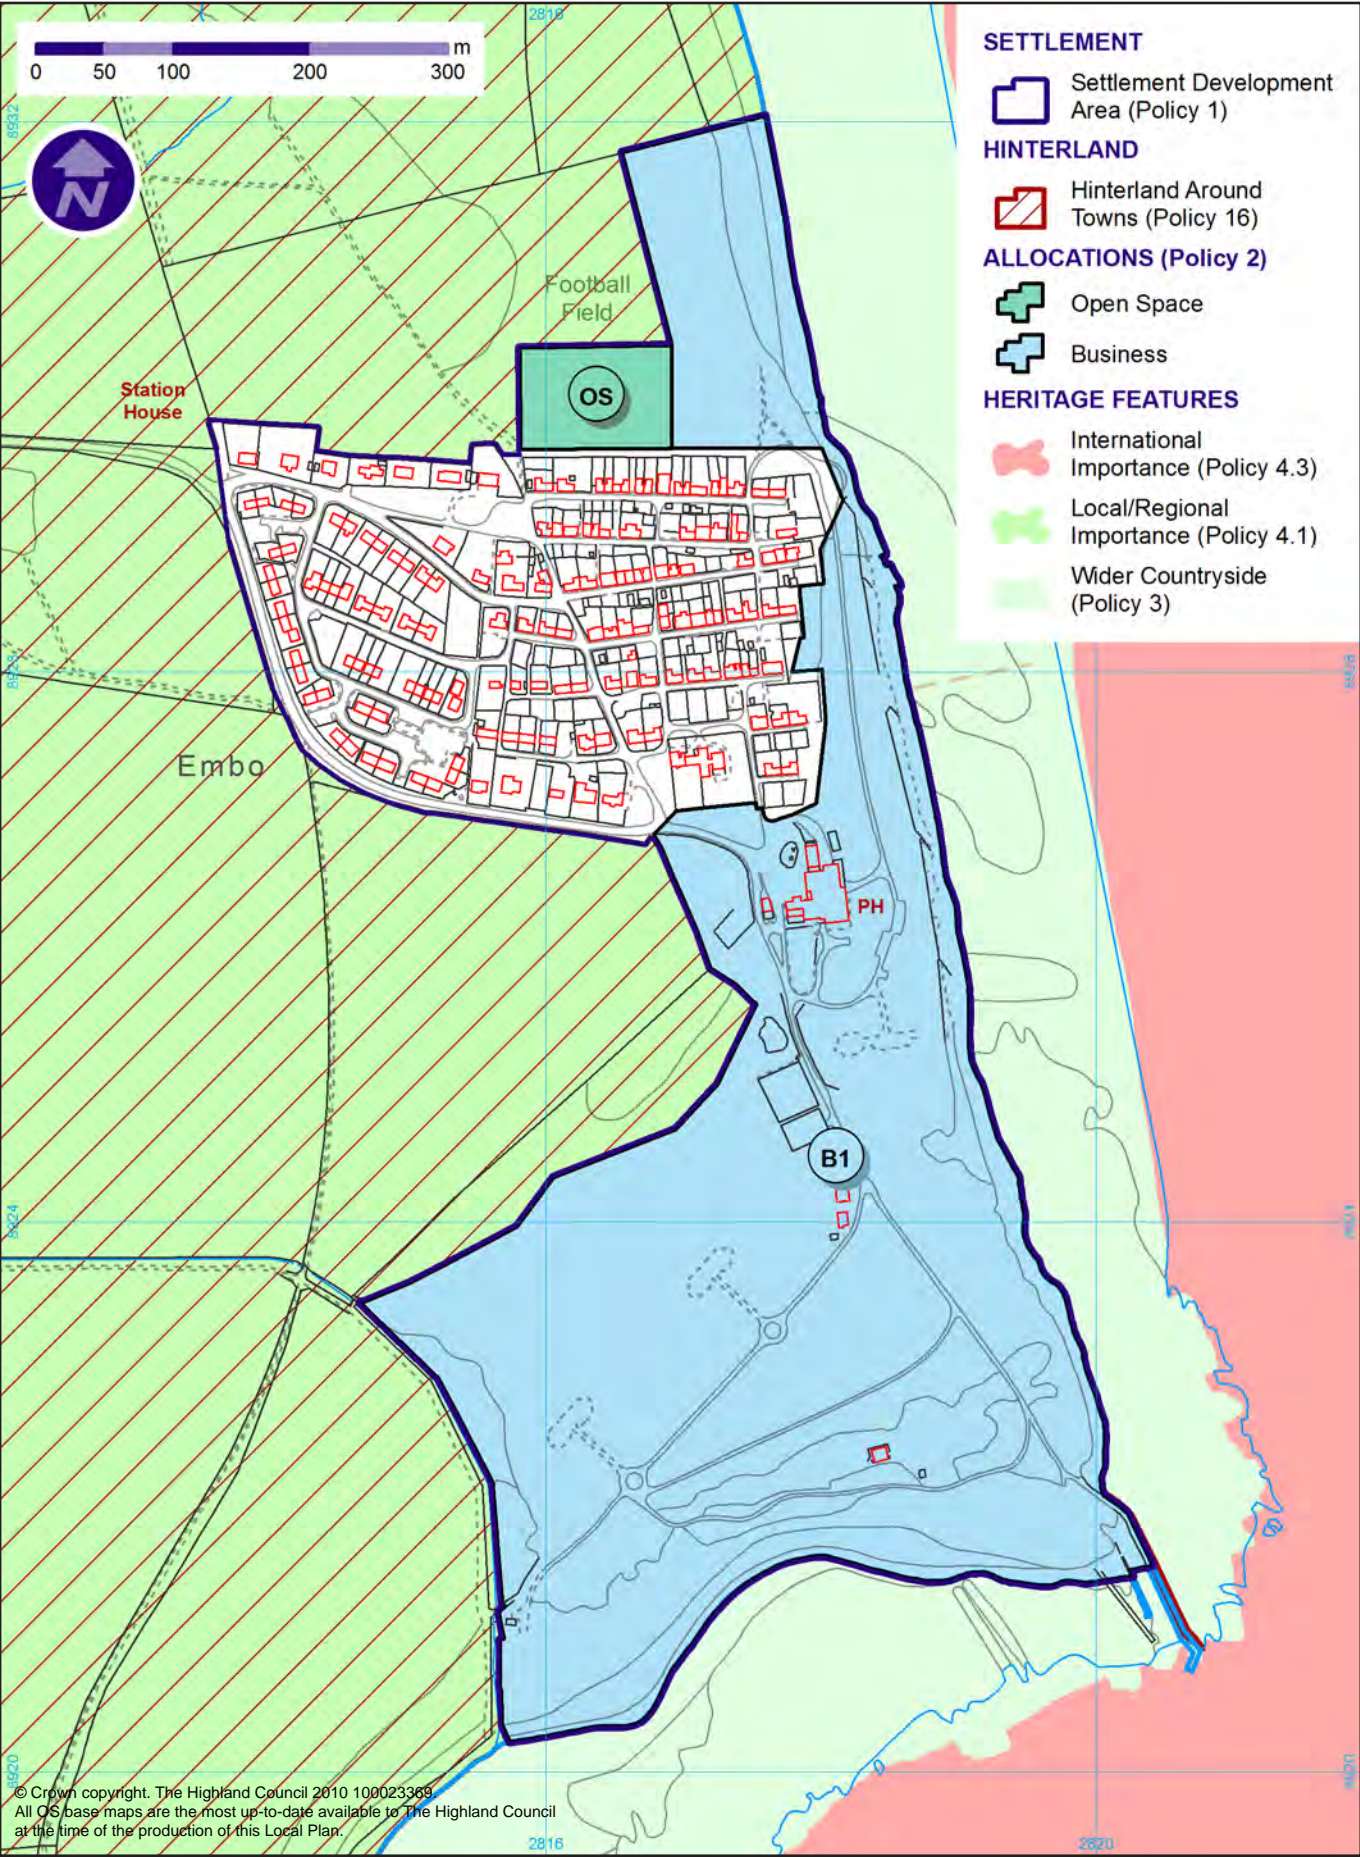

The community is seeking to fund the development of the old school to provide a community centre to serve the settlement.

Grannies Heilan’ Hame lies along the coastline to the east of the settlement, taking advantage of the beach and dune systems and attracts many visitors to the area. The caravan park creates increased pressure on the road infrastructure and water supply during its operational period. The road serving the holiday park was constructed as a bypass to remove traffic from the narrow street pattern in the village.

However increasing pressure on the sand dunes from use by residents and visitors and potential for disturbance to wintering or breeding birds means there is a need to assess any effect arising from new development due to European protection.

Improvements to the Dornoch – Embo Road remain a priority for the community.

Water supply limitations are being addressed within Scottish Water’s current development programme.

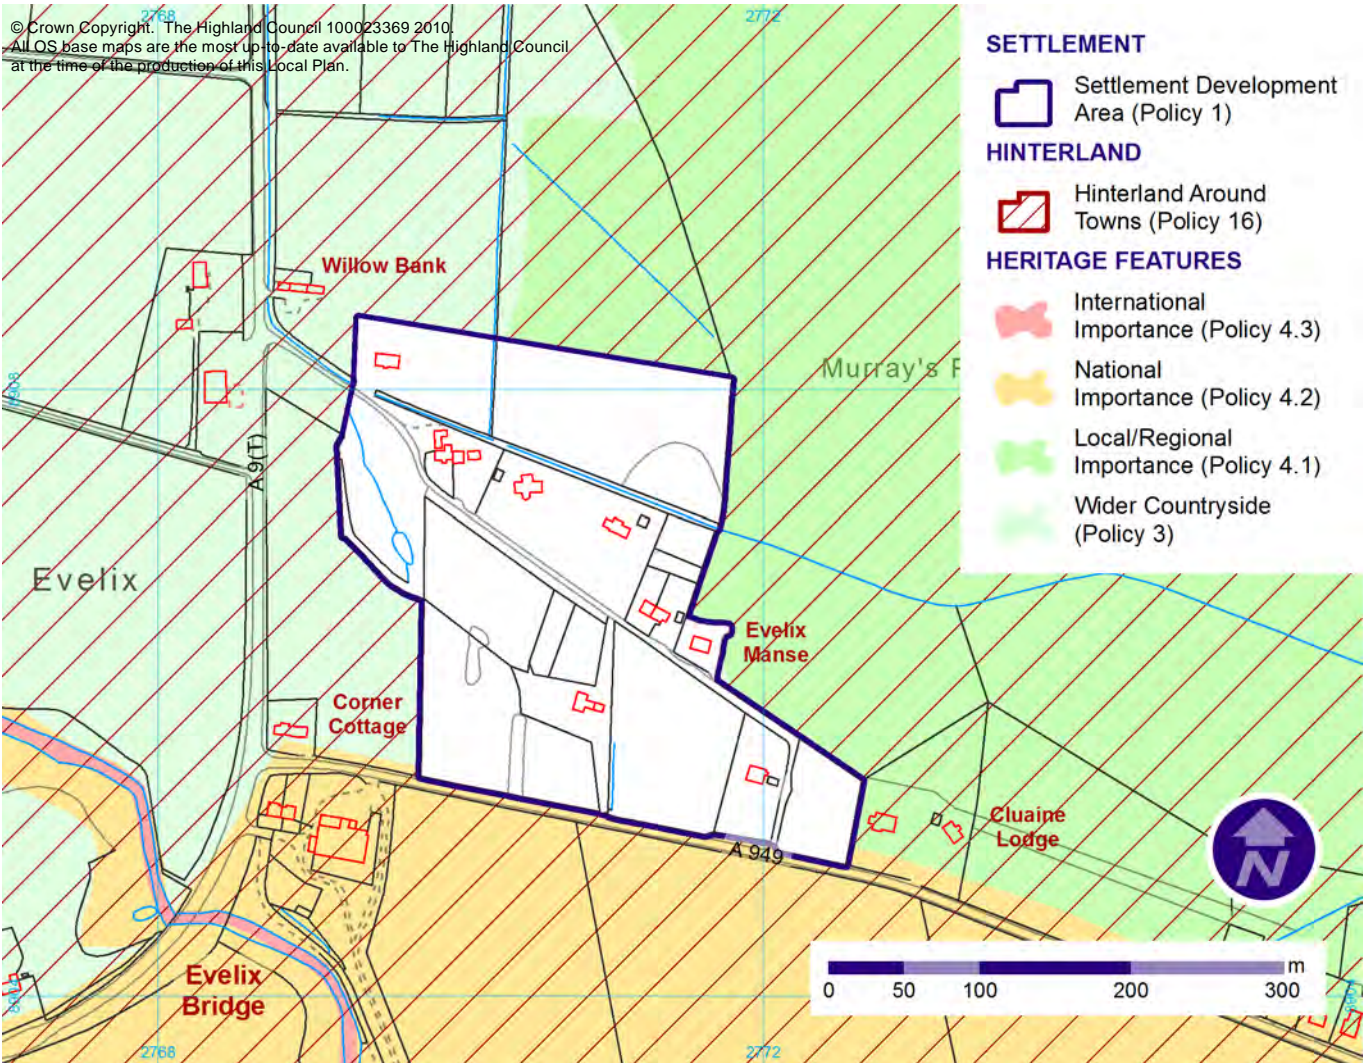

Development Factors

- Land availability/accessibility issues;
- Potential for development of new crofts as part of a community-led initiative to address both economic and housing requirements;
- Development proposals will have regard to the proximity of the Dornoch Firth and Loch Fleet Special Protection Area (SPA) and Ramsar site and the Moray Firth Special Area of Conservation (SAC) and the chambered cairn Scheduled Monument;
- Any developments served by private waste water system (in compliance with General Policy 7) will require to drain to land to safeguard water bodies and the Dornoch Firth and Loch Fleet SPA and Ramsar site and the Moray Firth SAC.
- Where appropriate, significant new development proposals shall be accompanied by a recreational management plan which examines any likely increased pressures from recreational access of the sand dunes or disturbance to wintering or breeding birds, arising from the development due to European protection. Appropriate assessment will require to be undertaken if Natura site interests are likely to be significantly affected. Where necessary, avoidance or mitigation measures should be provided. The Council will liaise with SNH and key local interests to co-ordinate submitted management plans and assess cumulative effects. The procedure will be subject to monitoring under the Action Programme.

Site Allocations

Site Ref.	Site Area	Location	Housing Capacity	Developer Requirements
B 1	23.7ha	Holiday Park	-	Existing holiday caravan park with potential for further development relating to existing planning permission and masterplan. Development proposals to respect the setting of the chambered cairn Scheduled Monument.

Prospects

Limited potential for development has been identified at Evelix (up to 6 units) where there are opportunities for suitably sited and designed houses to consolidate the existing grouping, subject to the adequacy of services and infrastructure. A high quality of house design will be required. Necessary road improvements to serve development may be required and will be provided directly by developer or through developer contributions. Localised flooding issues may require the preparation of a Flood Risk Assessment. Requirement to retain and integrate watercourses as natural features within the development.

Development Factors

- A high quality of house design will be required;
- Necessary road improvements to serve development may be required and will be provided directly by the developer or through developer contributions.
