PLANNING & DEVELOPMENT SERVICE
THE HIGHLAND COUNCIL

FOREWORD

I am pleased to present the Council's new Local Plan for Sutherland. This is the land-use Plan which the Council wishes to use to guide development and investment in the area over the next few years and through that to help deliver the Community Strategy.

The Plan's intention is to accommodate significant growth in population overall and to enable communities to grow sustainably to meet their needs. A growing population requires homes, jobs, services and facilities and the Plan aims for these needs to be met effectively. More affordable housing and better design quality in development should be key outcomes if the Plan is successful.

Meanwhile, Sutherland's important assets- natural, built and cultural- will be safeguarded. Retaining the richness of the area will be important to its future prosperity.

By preparing and implementing the Sutherland Local Plan, the Council can make significant progress with its Programme, "Strengthening the Highlands". However, achieving everything set out in the Plan will require many other organisations and individuals to play their part too.

We are grateful for the interest and contribution of the public, other parties and organisations who had commented on the *Sutherland Futures* issues and options paper and the draft Plan. Outstanding issues were the subject of an independently chaired examination before finalisation of the Plan. I believe the Plan has benefited from these contributions and will provide an effective framework in guiding investment and managing development across Sutherland.

Councillor Ian Ross

**Chairman: Planning, Environment
& Development Committee**

RO-RÀDH

Tha mi toilichte Plana Ionadail ùr na Comhairle do Chataibh a chur an làthair. Seo am Plana cleachdadh-fearainn a tha a' Chomhairle airson a chleachdadh mar iùl a stiùireas leasachadh is tasgadh san sgìre thar nam bliadhnaichean romhainn gus cuideachadh le libhrigeadh Ro-innleachd na Coimhearsnachd.

'S e amas a' Phlana gun còmhdaich e fàs ann an àireamh an t-sluaigh is gun toir e cothrom do choimhearsnachdan fàs gu seasmhach gus coinneachadh rim feumalachdan. Tha barrachd sluaigh a' cur feum air dachannan, obraichean, seirbheisean is goireasan agus tha am Plana ag amas air coinneachadh riutha sin gu math. Bu chòir gum biodh barrachd thaighean aig prìs ruigsinneach,, agus càileachd dealbhaidh nas fheàrr, nam prìomh bhuilean coileanadh ma shoirbhicheas leis a' Phlana.

Aig an aon àm, bidh sochairean nàdarra, togte agus cultarail a tha cudromach ann an Cataibh air an dìon. Bidh e cudromach sochairean na sgìre a ghleidheadh gus an soirbhich le cùisean san àm ri teachd.

Le bhith ag ullachadh is a' cur an gnìomh Plana Ionadail Chataibh, thèid aig a' Chomhairle air fìor adhartas a dhèanamh leis a' phrògram, "A' neartachadh na Gàidhealtachd." Ach, gus na tha air a chur a-mach sa Phlana a choileanadh, feumaidh iomadh buidheann eile, is daoine fa leth, pàirt a ghabhail ann cuideachd.

Tha sinn taingeil airson ùidh is tabhartasan a' phobaill is nam buidhnean eile a thug seachad beachdan air a' phàipear roghainnean *Sutherland Futures* agus air an dreachd Phlana. Chaidh sgrùdadh a dhèanamh air cùisean air leth, fo chathraiche neo-eisimeileach, mus deach am Plana a chrìochnachadh. Tha mi den bheachd gun robh na tabhartasan seo buannachdail don Phlana is gun toir iad seachad frèam math airson a bhith a' stiùireadh tasgadh is leasachadh air feadh Chataibh.

An Comhairliche Ian Ross

Cathraiche: Comataidh Dealbhachaidh, Àrainneachd & Leasachaidh

Accompanying Documents: Sgrìobhainnean Co-cheangailte:

A **separate Map Booklet** contains the Settlement Text and Proposals Map Insets as well as Background Maps. The Sutherland-wide Proposals Map is on a separate, larger, folded sheet.

The Strategic Environmental Assessment which is required by strategic environmental regulations can be found in the **Environmental Report**.

The Habitats Regulations Appraisal of the Local Plan, which includes **Appropriate Assessment**, is likewise available for reference as a separate document.

NOTE

Following adoption of the Local Plan the following additional documentation will be produced and made available:

- Strategic Environmental Assessment: Post-Adoption Statement;
- An Action Programme;
- Monitoring information.

Documents are made available on www.highland.gov.uk

2 Introduction & Context

2 Ro-ràdh & Co-theacsa

2.1 How to Read and Use the Plan

2.1 Mar a bu chòir am Plana a Leughadh is a Chleachdadh

The Local Plan is made up of maps and text. If you are interested in finding out what the Plan means for your particular area then you need to read both. The easiest way to find your community is by using the large Proposals Map which shows the whole area covered by the Plan. Once you've found your community, the Proposals Map will show you which text you need to read and whether there is more detailed mapping and text available. The larger communities will have this detail shown on a separate "Inset". For example, if you wanted to find what the Plan means for Lairg then you would find it on the Proposals Map which would tell you that there was a detailed "Inset" available and its reference number. The Lairg "inset" sets out all the text and mapping specific to that place.

2.2 However, to get the complete picture, you also need to read the Plan's "General Policies" which are listed in section 5 below as these can also affect a local issue. Larger or more controversial proposals may also be affected by the Plan's "Strategy" (section 4B) and "Vision" (section 4C). All development proposals will be assessed for the extent to which they contribute to the achievement of the plan objectives in section 3. These proposals may also require knowledge of policy or law at Highland-wide, national and European level. Links to this further reading are given in the "Other Factors" below.

2.3 Plan Stages

2.3 Ìrean a' Phlana

The Plan's current content reflects extensive community and other stakeholder consultation. The Council has considered comments made on the key land use issues for the area at the start of plan preparation and comments made on the Main Issues and Options contained within 'Sutherland Futures'. The Council subsequently published and consulted on a Deposit Draft of the Plan and an accompanying Draft Environmental Report. However, the Council then decided to provide further opportunity for people to comment on the contents of the Plan and its accompanying Environmental Report and opportunity to comment on a new Supplement to the Environmental Report. All that consultation was then treated as being 'pre-deposit consultation'. The Council considered all of the comments or representations received to those consultations. The Council then published a further full draft of the Plan which incorporated any changes the Council decided to make. It was the formal Deposit Draft Local Plan, accompanied by a revised Environmental Report and there was opportunity for the public to submit representations for consideration. The Council wrote to those people and organisations who submitted representations on the earlier drafts of the Local Plan, asking them to consider which of their representations had, and which had not, been resolved by the changes made to the Plan. The Council requested an indication as to which representations were unresolved and were maintained and confirmed as representations to the Deposit Draft 2008. Those that were, were carried forward and considered further after the close of the

consultation period on the Deposit Draft together with the other representations received. After that a public examination undertaken by two people independent of the Council was held to deal with any unresolved issues. These people (reporters) judged whether further changes to the Plan were required prior to its final adoption. Their Report of Examination was received by the Council on 8 January 2010 and is available for reference. It was considered by the Council and a number of modifications were made to the Plan and published prior to its adoption. The Plan Stages are set out in the diagram at the end of this section. The stages from examination stage onwards were carried out under transitional arrangements following introduction of the Planning etc. (Scotland) Act 2006. The Plan's content was already a factor in deciding on planning applications as it progressed through its latter stages.

2.4 Existing Local Plans

2.4 Planaichean Ionadail a tha ann Mar-thà

This Sutherland Local Plan has been prepared for the Plan Area as defined on the Proposals Map and shown diagrammatically on the map below. Upon its adoption, the Sutherland Local Plan replaces earlier adopted Local Plans in so far as they relate to that Plan Area. Prior to that, the earlier adopted Local Plans were still affecting planning application and other investment decisions.

2.5 The Development Plan

2.5 Am Plana Leasachaidh

The Highland Structure Plan, which was approved by Scottish Ministers and came into effect on 26 March 2001, together with the Local Plan comprises the statutory development plan. Both contain policies intended to guide development and land use change. Decisions on individual planning applications must accord with the Development Plan unless material considerations indicate otherwise. It should be noted that the Council has begun preparing a new Highland wide Local Development Plan and will be preparing other Local Development Plans, as referred to below, which will in time replace the Highland Structure Plan and this Local Plan.

2.6 Other Factors

2.6 Nithean Eile

In preparing a local plan and in making decisions on planning applications, The Council must also take into account other factors, such as:

- national planning policy and guidance which is prepared by the Scottish Government and includes the National Planning Framework, Scottish Planning Policy, Circulars and Planning Advice Notes; this Plan does not attempt to name all of the documents that might be relevant to a particular case and it is therefore advisable to check for available and current documents (via www.scotland.gov.uk);
- other Highland-wide policies such as the Highland Structure Plan, Development Plan Policy Guidelines/ Supplementary Planning Guidance and Development Briefs (a full list is available via www.highland.gov.uk or from the contacts below);
- the strategies and plans of other public agencies like Highlands & Islands Enterprise, Scottish Natural Heritage and Scottish Environment Protection Agency; an Appendix to the Environmental Report for this Local Plan provides an extensive list of documents but it is advisable to check for other available documents and for currency;
- National, UK and European legislation such as the Town and Country Planning (Scotland) Act 1997 as amended and the strategic environmental assessment regulations, which places a requirement to demonstrate how the Plan will affect the environment (available via www.opsi.gov.uk).

2.7 Over the next few years the Council will be implementing the provisions of the new Planning etc (Scotland) Act 2006. The new Act has introduced new requirements for development plans to replace the existing Structure Plan and Local Plans whilst the Scottish Government's National Planning Framework has been reviewed and has been given increased significance. This Local Plan was able to continue through its process to adoption but eventually the Council will come to replace it with a new-style Local Development Plan. The Council's intentions for future plan-making and preparation of guidance are set out in its

Development Plan Scheme which is available on the Council's website. The first new-style plan that is being prepared is the Highland-wide Local Development Plan (HLDP) dealing with pan-Highland and strategic issues. The Council is therefore undertaking a range of work to inform the review or development of planning policy on such issues for the HLDP and, as such, this Sutherland Local Plan does not cover those. The Development Plan is of considerable importance in decision-making and the provisions of the new Act enhance its importance.

2.8 Purpose

2.8 Adhbhar

The Plan is to:

- provide the principal framework for deciding on planning applications by identifying the most appropriate uses for land in the area - allocating sites for redevelopment or new building for housing, business and other activities, together with policies to protect public amenity and heritage features.
- contribute to the wider corporate and public vision for the Area - taking forward the Community Plan and providing a basis for partnership working and securing resources, including European funds.
- provide co-ordination between the infrastructure, development and conservation programmes of public agencies and voluntary groups, with the aspirations of the private sector.
- ensure effective participation by everyone with a legitimate stake in the area's future, and in particular to enable local people to influence the planning of their own communities.

2.9 Timescale

2.9 Sgèile-ama

The Plan deals with the period to 2015. However, it includes a longer term vision spanning into the 2020s.

2.10 Further Information

2.10 Tuilleadh Fiosrachaidh

If you have queries about the Local Plan, further information can be obtained from the Sutherland Local Plan Team by writing to:

3 Plan Objectives

3 Mion-amasan a' Phlana

3.1 Key objectives provide a focus to the Plan and help us to ensure that its individual policies and proposals are relevant and necessary, so that the Plan is 'fit for purpose'.

3.2 The Local Plan will play a key role in helping to achieve the community's strategic objectives. In particular it needs to help deliver those aspects of the Community Strategy/Plan which have land-use planning implications. The Sutherland Partnership developed "A Strategy for Sutherland 2005 - 2009" and has since developed "A Community Plan for Sutherland- an action grid springing from the Sutherland Partnership Strategy" (2006). The overarching aim of the Community Strategy for Sutherland is:

"Positively influencing population change in Sutherland to achieve, over time, a vibrant, viable and revitalised population that enjoys a high quality of life."

3.3 The main theme of the Community Strategy is "Strengthening Our Communities" and under that the Community Plan sets out seven **strategic objectives (SO)**:

SO1. Promoting opportunities for young people

SO2. Putting people first

SO3. Welcoming talent

SO4. Growing our economy

SO5. Confident & thriving settlements

SO6. Promoting environmental benefits

SO7. Making partnership more effective

3.4 The Local Plan also needs to relate to the seven strategic themes of the "Highland Structure Plan" (2001). The key objectives for the Local Plan are therefore set out below under the seven strategic themes of the Structure Plan and with cross-reference made to the most relevant strategic objectives (SOs) of the Community Plan, to indicate how the Local Plan will contribute.

3.4.1 Conserving and promoting the Highland identity

3.4.1 A' gleidheadh is a' brosnachadh dearbh-aithne na Gàidhealtachd

For Sutherland:

a. Conserve and promote the uniqueness of Sutherland's natural, built and cultural identity, and its contribution to the identity of the Highlands as a whole, whilst recognising the diversity within Sutherland itself and the relationship with adjacent areas.

- b.** Accommodate growth and change in a planned way, ensuring that Sutherland's valuable assets- natural and other- are conserved. These assets are of key importance to the future growth of the economy, to achieving quality living environments and to identity.
- c.** Respect evidence of the way in which communities have interacted with their environment, which is a key part of natural, built and cultural identity and heritage.
- d.** Provide opportunity for the continuance of traditional land and sea based activities and industries, particularly crofting, forestry and fishing and their rejuvenation, for example the creation of forest crofts through community-led schemes, cooperative working and effective woodland practice.

Helps meet SO1 and SO2.

3.4.2 Adopting a proactive approach to the wise use of the natural environment

3.4.2 A' gabhail ri dòigh-obrach dhèanatach airson a bhith a' cleachdadh na h-àrainneachd nàdarra gu glic

For Sutherland:

- e.** Safeguard important assets of the natural environment for their own sake and as an asset to the Sutherland community.
- f.** Recognising that the community's existence will impact in some way upon the natural environment, to avoid or otherwise minimise and mitigate against negative impacts through good planning of future development, for example avoiding putting flood-sensitive development in areas at high risk of flooding.
- g.** Take positive advantage of opportunities provided through development to improve upon the richness of the existing natural assets, for example through enhancing biodiversity. It can also be sustainable in its own right and may involve activities which use Sutherland's natural environment in ways which benefit communities and the economy of the area.
- h.** Promote opportunities for renewable energy development, particularly small-scale community-led schemes, and implementation of sustainable waste management solutions.

Helps meet SO2, SO3, SO4 and SO6.

3.4.3 Taking an integrated approach to improving accessibility to goods, services and markets

3.4.3 A' cleachdadh dòigh-obrach amalaichte do bhith a' leasachadh cothrom air batharan, seirbheisean is margaidean

For Sutherland:

- i.** Recognise that whilst opportunities will be pursued to increase the availability of

sustainable travel choice and to improve accessibility, given the rural nature of the Plan area significant use of the private car can be expected to continue for many trips and that many people already travel far for some services. Furthermore some parts of Sutherland are dependent upon adjacent areas for certain services, for example secondary schooling in Ullapool and Thurso.

- j.** Do what we can to encourage the retention of key local services in Sutherland's communities, including a strategic network of fuel stations, support provision of accessible and varied leisure and recreational facilities and promote innovation in the delivery of public services as part of sustainable communities.
- k.** Focus large scale development on larger settlements and/or at transport/utility nodes which can offer a range of services within easy reach.
- l.** Recognise the positive role to be played by innovative and integrated private, public and community transport solutions in bolstering the sustainability of rural communities.
- m.** Deliver improvements required to services and facilities in step with housing development. An Action Programme will seek to guide implementation and track progress.

Helps meet SO1, SO2, SO4, SO5 and SO6.

3.4.4 Consolidating the settlement hierarchy

3.4.4 A' daingneachadh na rangachd rèiteachaidh

For Sutherland:

- n.** Confirm the settlement hierarchy through the Plan's Strategy. It is emphasised that this hierarchy and the settlement development areas identified are for land-use planning purposes and is not intended to identify the wider extent of communities which associate themselves with those settlements.
- o.** Provide an adequate supply of land identified for new development to sustain places in supporting homes, jobs, services and facilities to meet communities' needs.
- p.** Accommodate substantial new development in a sustainable way, particularly in certain settlements in accordance with the hierarchy, as part of the overarching theme to strengthen communities, whilst in other settlements provide for community growth but on a smaller scale.

Helps meet SO2, SO3, SO4, SO5 and SO6.

3.4.5 Creating an improved business environment

3.4.5 A' cruthachadh àrainneachd ghnòthachais nas fheàrr

For Sutherland:

- q.** Provide a range of sites for employment development whilst also operating a framework of

policies which accommodate employment-generating development on other sites- particularly where it supports the sustainability of fragile communities and does not harm interests of acknowledged importance.

r. Through this, accommodate the needs of traditional land and sea based industries whilst also providing opportunity to respond to new small and medium scale enterprise and entrepreneurialism.

s. Provide a range of opportunities for housing provision, including affordable housing, linked with planning of services and facilities, including infrastructure investment, helping to provide for the needs of prospective employees.

Helps meet SO1, SO3, SO4, SO5 and SO6.

3.4.6 Addressing the need for quality living environments

3.4.6 A' cur aghaidh ris an fheum airson sàr àrainneachdan fuirich

For Sutherland:

t. Contribute to the creation, enhancement or regeneration of communities following sustainable development principles.

u. Examine the details of individual planning proposals as well as the context within which various proposals fit in with the existing built environment and relate to the natural environment.

v. Seek good design quality, place-making and innovation in new development and encourage the retention of key services in communities.

Helps meet SO1, SO2, SO3, SO5 and SO6.

3.4.7 Working in partnership with the community and other agencies

3.4.7 Ag obair ann an com-pàirteachas leis a' choimhearsnachd is buidhnean eile

For Sutherland:

w. By working with the community and other agencies in implementing the Local Plan, deliver aspects of the Community Plan.

x. Drive delivery of the Local Plan through an Action Programme, indicating which organisations will be involved in implementation of the Local Plan and a timescale for implementation, and check progress on implementation of these through regular monitoring. It is important to monitor progress towards achieving the objectives of the Plan and the agreed actions, both generally and in detail where necessary. Only by undertaking such monitoring will the Council know whether the Local Plan remains fit for purpose or requires review.

Helps meet SO1, SO2, SO5 and SO7.

4 Key Forecasts, Strategy and Vision

4 Prìomh Ro-sheallaidhean

A - Key Forecasts

A - Prìomh Ro-aithrisean

4.1 As shown in Table 1, the 2008 population of Sutherland is estimated to reach 13,956. Using national data and accepted pan-Highland assumptions this is projected to decrease by 2% by 2018. Deaths will continue to outnumber births and whilst overall there is set to be positive in-migration this will be insufficient to offset the losses of population. Despite this, there would be a 6% increase in the number of households due to changing patterns of households and this means that some housing development would be necessary to cater for the population's needs.

4.2 In common with the rest of Highland, the population of Sutherland is ageing and this trend is expected to continue. The age profile of the Area's population is projected to change significantly over the next 10 years. The number of older people is set to increase whereas the number of core workforce and young people is set to decrease. A 29% growth in those 65 or older and a 24% decline in children are the headlines. This is due to declining birth rates, the inevitable ageing on of the current population, the older age profile of in-migrants and the continued out-migration of young adults. However, it is also important to note that the core workforce would fall by 9% which could reduce the economic output of the area and hinder the ability to provide and run the necessary services to sustain Sutherland's communities.

4.3 Against this backdrop, the overarching aim of the Community Strategy for Sutherland is:

“Positively influencing population change in Sutherland to achieve, over time, a vibrant, viable and revitalised population that enjoys a high quality of life.”

In line with this aim and the Local Plan's vision and objectives, the strategy of this Local Plan is therefore based on increasing in-migration and reducing out-migration (particularly of young people). This will of course also have the added benefit of sustaining local primary schools and other facilities. The Plan's provisions are therefore based not on Table 1 but on a vision of maintaining a stable working age population (in terms of number of people) to 2026, as illustrated in Table 2.

Table 1 – Populations projections using national data and accepted pan – Highland Assumptions

Projection	2008	2018	2008-18 Change
Population*	13956	13639	-317 (-2%)
Younger People (0-15)	2096	1590	-506 (-24%)
Core Workforce (16-64)	8515	7720	-795 (-9%)
Older People (65+)	3345	4329	+984 (+29%)
Households	6704	7082	+378 (+6%)
Additional dwellings (Houses) Required 2008-2018 (assumes a similar proportion of future second / holiday home ownership and a 25% flexibility allowance to allow developers a choice of landowners, locations and markets)			+557 (c. +60p.a.)

** based on former areas; Edderton was not in Sutherland.*

Table 2 – Vision for stable working age population

Projection	2008	2018	2008-18 Change
Population	14225	15066	+841 (+6%)
Younger People (0-15)	2151	1868	-283 (-13%)
Core Workforce (16-64)	8706	8725	+19 (+0%)
Older People (65+)	3368	4473	+1105 (+33%)
Households	6805	7691	+886 (+13%)
Additional dwellings (Houses) Required 2008-2018 (assumes a similar proportion of future second / holiday home ownership and a 25% flexibility allowance to allow developers a choice of landowners, locations and markets)			+1304 (c. +130 p.a.)

** based on former areas; Edderton was not in Sutherland.*

4.4 Under the Plan's strategy, it is anticipated that enough land to accommodate a little over 1,300 additional houses will need to be identified in Sutherland for the period to 2018, which represents 130 new houses per annum. This includes, though, a 25% flexibility allowance to allow developers a choice of landowners, locations and markets. Taking this into account, the actual number of homes anticipated to be required for that period is around 1,040 (104 per annum). On average over recent years, around 50 houses have been built per year within Sutherland as a whole although the completion rate has been increasing and in

2006 some 67 houses were completed. The level of building will need to approximately double if the strategy is to be delivered. We are confident that this can be achieved though and a key requirement has been met: the Plan makes adequate provision for housing through its allocations and other policy provisions.

4.5 Table 3 illustrates that land allocated for housing development (including for affordable housing and any housing element of mixed use proposals) is sufficient to provide the bulk of the requirement, including the 25% flexibility allowance. In fact, the policies of the Plan additionally provide scope for some housing development to occur on 'windfall' sites, to a greater or lesser extent both within and outwith the settlement development areas and this is expected to be more than sufficient to meet the remainder of the requirement. The Council's 2007 Housing Land Audit showed that, within the supply at that time, there were permissions on windfall sites for around 400 housing units (which was around 40% of the total effective supply for the period 2008-2012). It is anticipated that windfall will continue to make a significant contribution. Confidence in achieving housing delivery also arises from the fact that there are significant allocations which have been allocated in previous Plans and which are now likely to come forward, that 'volume housebuilders' are showing more active interest in developing in Sutherland than has been the case historically, that we have sought through consultation to allocate sites that are effective (likely to be able to be brought forward for development) and that affordable housing programmes are set to continue. The Council is examining innovative methods of achieving affordable housing delivery, in the context of the recently changed economic circumstances which will continue to affect spending for a number of years.

Table 3 - How the allocations meet requirements

Additional Dwellings (Houses) Required 2008-2018 (from Table 2)	1304 (c. 130 p.a.)
Total Housing Capacity of Allocated Sites (based on indicative capacities)	1180

4.6 An ageing population will require increased care provision and has clear implications for the Plan in terms of allocating land for housing and community facilities. These implications mean that the Plan should identify sites that are accessible to community facilities and any public transport connections, suited to the provision of housing for varying needs or housing for older people and suited to additional care home provision. Key considerations will therefore include sustainability and, as part of that, accessibility. The topography of the site is likely to be a significant issue, given that it affects how easy or difficult it is to move around, especially on foot or by other non-motorised means.

4.7 The Local Plan needs to identify an adequate supply of land for building both affordable and private housing for existing residents and those moving into the area. In 2003 the Highland Housing Needs Study¹ projected the need for additional social rented housing

¹ *Highland Housing Needs Study, DTZ Pineda for The Highland Council, 2003*

over 5 years (to 2008) in each of the eight former areas of the Highland Council. It concluded that, at that time, there was no need for additional affordable housing to be provided in Sutherland, as the existing stock of affordable homes was sufficient to meet the need arising. In 2005 Communities Scotland commissioned work (The Bramley Report) to estimate the need for additional affordable housing across the different local areas of Scotland². This work essentially confirmed the findings of the 2003 Housing Needs Study and projected a modest need for 5 additional houses per year. Whilst this need is not included in the overall housing requirement figures set out in Tables 1 and 2, clearly the level of housing land provision overall (allocated sites and windfall) is sufficient to cater for this need as well. House prices have risen significantly in Sutherland since 2005 and it is likely that this modest need has grown. Analysis of house prices in Sutherland, and in particular the prices of previously owned houses, shows that prices have increased between 2004 and 2006 by more than the Highland average in both Wards covered by this Plan. The price rise in Ward 1 (North, West & Central Sutherland), at £64k, is in fact the biggest rise of all the Wards in Highland. Examining just the lower quartile prices for previously owned houses (often used as a measure of affordability for those on lower incomes) again reveals significant increase in both Sutherland wards, greater than the average for Highland. This illustrates a growing problem of non-affordability in the Plan area. Table 4 provides figures from the Council's housing lists which further illustrates a demand for affordable housing in the Plan area. Work is in hand to establish the current housing need and requirement for housing market areas within Highland in accordance with Scottish Planning Policy and Government Guidance on Assessing Housing Need and Demand³ and the results of the work will inform the Council's new Local Housing Strategy and the forthcoming Highland wide Local Development Plan.

Table 4 - The Council's Housing Lists

The Highland Council housing waiting list as at April 2007 (total of 'first preference' instances where first preference is located within Sutherland; not including Housing Association lists)	373
The Highland Council housing transfer list as at April 2007 (total of 'first preference' instances where first preference is located within Sutherland; not including Housing Association lists)	66

4.8 There continues to be demand for housing stock which may be used as second/holiday homes and will therefore not be available for use by permanent households. The percentage of dwellings in Sutherland which were either vacant or being used as a second/holiday home as at 2004 was 18.2% according to Council tax records and this pattern has been taken into account in drawing up the Plan. Communities are concerned about the

² *Local Housing Need & Affordability Model For Scotland Update (2005 base); Bramley et al.; Communities Scotland*

³ *Housing Need and Demand Assessment Guidance, Scottish Government, (2008)*
See www.scotland.gov.uk/Topics/Built-Environment/Housing/supply-demand/guidance

impact that part-time occupancy has on their wellbeing. The Council cannot control the ownership and occupation of housing on the open market. If the housing stock is limited to the existing there are real constraints for local people in seeking homes, with little availability and choice. However, by enabling new development, which will include affordable housing provision, they will have more opportunity to stay in or enter the local housing market and meet their housing needs. There is significant pressure on the housing market in many parts of Sutherland due in part at least to demand from outwith the area. Records of house sales over the last 16 years show that Sutherland has a higher proportion of sales to people coming from outside Sutherland (44%) than is the case in the other parts of Highland (on average, 25%). Within Sutherland, the figure is higher in the West (50%) than in the North (42%) or East (43%). The Local Plan will seek to ensure that suitable housing is available for all that require it.

4.9 Forecasting employment land requirements with any accuracy is very difficult because of the lack of comprehensive and recent local data. Assumptions about existing job numbers, the number of persons requiring work (economically active) in the future and average employment densities (how much land is required to accommodate a specified number of jobs) are all uncertain.

4.10 However, it is worth noting that Sutherland does not have high unemployment. The May 2007 figure stood at 2.4% - around the proportion for Scotland although a little above the proportion for Highland.

4.11 Sutherland's economic structure varies from the Highland average in terms of under-representation in the business, manufacturing, retail and distribution sectors. It relies more heavily on the primary sector particularly in agriculture/crofting, fishing, tourism, public administration, education and health. The natural resource industries also play an important part in the economic, social and cultural life of Sutherland.

Housing Allocation : Ord Place, Lairg

Industrial Allocation : Culag, Lochinver

Housing Allocation : Rosslyn Street, Brora

4.12 A significant number of jobs were lost in textile manufacturing, telecommunications, transport and distribution and fishing in the last 20 years, which have had a profound impact on some communities. While unemployment is low, so is the number of jobs. This continues to cause many young people to leave Sutherland as well as for further education and training. However, a survey of people who left over the past 20 years found that a massive 75% of them would like to return to the Sutherland area if suitable jobs were available for them and their families.

4.13 We have therefore sought to ensure that adequate land is available to cater for a range of future business, industrial and other job-creating activities and that the policy framework enables entrepreneurs to explore a range of options for locating and accommodating their proposals. We have also sought to ensure that an adequate housing supply is in place for workers associated with future investment.

B – Strategy

B – Ro-innleachd

4.14 The “ideal future” or *Vision* for Sutherland is set out in section 4C of this document. This *Vision* is given sharper focus by the key Plan objectives (section 3) and by the following *Strategy*. These key ideas and proposals have evolved through extensive consultation with the public and key agencies.

4.15 The over-arching aim is for Sutherland to grow its population, compete in the global economy and sustain the highest standard of services while maintaining and enhancing the outstanding quality of the natural, built and cultural heritage of the area. That way it will be able to fully share in and contribute towards Highland prosperity.

A Strategy for Sustainability

Ro-innleachd airson Seasmhachd

4.16 What happens in the next 5-10 years is vital to a sustainable future. Whilst aspiration and ambition need to be balanced with reality, it is essential to sow the seeds of long-term regeneration and economic stability. In particular, as highlighted in Section 4A *Key Forecasts*, the strategy is aimed at addressing population trends by providing opportunity for young and working age groups to stay or settle in Sutherland and contribute to its present and future. This is no easy task and operation of the Local Plan alone would be insufficient to deliver this change. The themes and principles of the Plan’s *Vision* are closely allied to those of the Community Plan and need to be taken forward through the Community Planning Partnership and the strategies and programmes of the agencies, working with the private sector and communities themselves.

4.17 This requires a sustainable development strategy capable of delivering up to 1,300 new houses in Sutherland over the next ten years. The affordability of housing will need to be addressed both in terms of meeting the deficit for affordable homes and influencing the affordability of new housing generally by ensuring a sufficient supply of land for development and creating the conditions that encourage local people to stay. That will depend upon attracting sufficient work and economic investment to Sutherland. The Local Plan seeks to

ensure that a range of strategically located sites are available for this and that it also contains a policy framework which enables consideration of proposals for economic development on sites not specifically allocated for the purpose, and for traditional industries, particularly in rural areas. Attracting work and economic investment, bringing healthcare, education and leisure facilities into the 21st Century, promoting transport choices and keeping custody of the outstanding heritage are essential to Sutherland's wellbeing and prosperity.

4.18 Growth and regeneration will be driven by promoting Sutherland's assets and opportunities and by addressing its deficiencies and constraints. A sustainable future should be founded on the following "drivers" and principles and a framework which promotes the right development, in the right location, at the right time.

Regenerating Communities Ag Ath-nuadhachadh Choimhearsnachdan

4.19 The Highland Structure Plan identifies a high level settlement hierarchy which comprises Regional Centres (Inverness), Sub-Regional Centres (Thurso, Wick, Dingwall, Fort William and Portree) and Local Centres. There are therefore no Regional or Sub-Regional Centres within Sutherland but the Plan area will be influenced by some of them. Seven of the Local Centres identified are in Sutherland and these are: Dornoch, Golspie, Brora, Lairg, Lochinver, Kinlochbervie and Bettyhill. Two Local Centres outside Sutherland will have an influence on the Plan area- Tain and Ullapool. Indeed, parts of Sutherland are dependent on centres outwith the Plan area for some everyday services, such as secondary schooling.

4.20 The Local Plan's *Main Centres* therefore comprise the Local Centres and additionally Helmsdale, which of the remaining settlements in particular displays an enhanced role similar to that of some of the Local Centres. These settlements will accommodate significant new development supportive of their roles, including sites for strategic development as appropriate.

Main Centre : Dornoch

Key Village : Bonar Bridge

Small Village : Portskerra

4.21 Amongst Sutherland's villages Bonar Bridge, Ardgay, Durness, Melness, Tongue and Scourie play key roles as service centres and places of development and as such are the *Key Villages* where development will support and enhance their roles.

4.22 A number of *Small Villages* provide basic facilities for local communities and opportunity to accommodate the immediate development needs of the local communities and including support for some fragile communities.

4.23 This settlement hierarchy provides a strategic framework for future development, having regard to the role played by settlements and to the opportunity to accommodate sustainable growth. There are Settlement Development Areas identified for all of these settlements. In addition there are smaller townships and housing groups. We have considered the possibility of identifying settlement development areas for them but have decided instead to rely upon the Plan's policy framework (especially those protecting assets) for the consideration of the merits of individual proposals. This may provide opportunity for some small scale development, particularly where it would support fragile communities and may provide opportunity for suitable community-led proposals.

4.24 The settlement hierarchy provides an indication of main settlements which are most likely to be able to accommodate larger-scale development sustainably.

4.25 Some 60% of the County's population is located in the south-east Sutherland and Kyle of Sutherland communities, which have also absorbed around 60% of new homes built in Sutherland in the past decade. These include the main centres supporting key services, some of which serve Sutherland as a whole. Close proximity to the Inverness and Inner Moray Firth economic growth "hub" and the A9 improvement corridor presents scope to extend housing market opportunities within Sutherland. Major allocations of land for expansion are identified at Dornoch, Golspie and Brora together with programmed infrastructure. The Plan seeks to maintain the momentum of regeneration in

Supporting Key Services : Golspie

Renewal Opportunities : Ardgay

Small Scale Development : Scourie

Lairg, Bonar Bridge and Ardgay through a mix of brownfield/renewal development, enhancement and/or a broader choice of land for development. Several smaller villages including Edderton, Rogart and Rosehall are capable of supplementing housing choice where the scale of building is in keeping with their character.

4.26 In the west and north-west of Sutherland, coastal communities have grown overall - approximately 240 houses have been added in 20 years. Whilst the shortage of development land has been acute, the housing market is much less fluid. The Plan seeks to deal with those shortages and identify preferred directions for development in Lochinver and Kinlochbervie through its land allocations. Opportunities are identified for Durness and Scourie to consolidate further where development is reconciled with amenity, crofting and service network considerations. A range of small villages and townships offers opportunities for small-scale building, reinforcing their economic and social fabric.

4.27 In the north and the sparsely populated interior, the population has fallen by 11% and less than 120 houses built, since 1981. These are the most fragile communities, vulnerable to rationalisation of services. The Plan seeks to promote available sites within Helmsdale, Bettyhill, Tongue and Melvich, securing affordable accommodation whilst also encouraging the outlying rural settlements to strengthen through small-scale development to meet community needs.

4.28 Through its allocations and policies, the Local Plan seeks to secure the provision of affordable homes and community infrastructure to assist in regenerating communities.

Creating Prosperity A' Cruthachadh Saoibhreis

4.29 Important strands of the strategy aimed at creating prosperity include: strengthening interaction with the growth "hub" to the south and Caithness to the north, particularly in the context of the decommissioning of Dounreay, diversifying the employment base in those parts of the County with

Affordable Housing : Bettyhill

Tourist Asset : Smoo Cave

Tourist Asset : Dornoch Links

Economic Development Opportunity : Golspie Business Park

greater self-containment and a genuine drive to sustain jobs and regenerate the remote, landward areas. Sutherland needs to maximise sustainable development of, and add value, in the resource-based landward sectors, grow its small business and service economy, promote its tourism and heritage assets and attract “footloose” e-commerce and inward investment which might be drawn to the Area by its accessibility and exceptional environment. Major improvements to transport infrastructure will help to facilitate these objectives. The A9 regional road network is vital to prospects. Improvements near Helmsdale are progressing in steps. There may be opportunities in the future to shorten journey times whilst improving local communities. Continued promotion of the Invernet commuter rail service can be expected to increase custom, and the strategic “gateway”/ distribution role of Lairg will maintain the rail-freight capacity of the Far North Line which is an important contributor to economic and social prospects of communities in Central Sutherland. There may be opportunities to promote strengthening of rail-freight infrastructure through the further development of a network of strategically located sidings with loading facilities.

4.30 The HITRANS Strategy (2007) identified a network hierarchy, which in Sutherland comprises:

- *Strategic Rail Network*- Inverness to Wick/Thurso;
- *Strategic Road Network*- Inverness A9 (T) to Wick/Thurso;
- *Regional Road Network*-
 - A836 Tain to Lairg/ A838 to Rhiconich /B801 Kinlochbervie
 - A837 Lochinver to Ledmore jct/ A835 Ullapool
 - A836 Bettyhill to Thurso;
- *Local Road Network*-
 - A839 The Mound to Lairg A839/A837 to Ledmore jct
 - A836 Lairg to Tongue
 - A836 Bonar Bridge to Lairg
 - A897 Helmsdale to Melvich
 - A838 Rhiconich to A836 Bettyhill
 - A894 Laxford Bridge to Skiag Bridge.

As part of a wider network they provide a link towards onward travel, be it by road, rail, ferry or air. The HITRANS Strategy concluded that the priority for the A9 North Corridor (encompassing road, rail, bus-based public transport) should comprise works at Conon Bridge and speed enhancement measures on the existing alignment of the Far North Rail Line, together with the delivery of a Route Action Plan approach on the A9 North road to provide climbing lanes and other improvements (including bypasses) to reduce the average journey time on the road. The HITRANS Strategy flags the option of by-passing Golspie and Brora in particular. The HITRANS Strategy also identified the A838 Kinlochbervie to Lairg road, for route enhancements in the medium term.

4.31 However, since the HITRANS Strategy was prepared the Scottish Government has undertaken its Strategic Transport Projects Review (STPR) which identifies interventions to be delivered, designed or developed beyond 2012 and primarily between 2012 and 2022. Projects relevant to the Sutherland Local Plan area are as follows:

- Strategic Road Safety Plan;
- Maintenance and Safe Operation of Scotland's Rail Network;
- Integrated ticketing;
- Rail system enhancements, including the replacement of the Radio Electronic Token Block signalling in the Highland region and;
- Road safety improvements in North and West Scotland.

A number of other measures in the STPR will have positive implications for the Sutherland area, including projects aimed at increasing the frequency of rail services and reducing journey times between Aberdeen and Inverness, and the Highland Mainline Rail Improvements Project aimed at improving network capacity for passengers and freight between Inverness and Perth.

4.32 The Council is in the process of reviewing and replacing its Local Transport Strategy (LTS). The LTS will need to identify priorities for local delivery in the light of what the HITRANS Strategy identified and of what has and has not been included in the STPR.

4.33 The Local Plan's Vision refers to the possibility of three substantial future transport interventions in Sutherland- namely bypasses for Golspie and Brora and a Dornoch Firth rail crossing. The HITRANS Strategy had flagged the option of by-passing Golspie and Brora as already noted, although the timeframe it indicated for possible preparation of schemes was at the earliest towards the end of the period covered by this Local Plan. The HITRANS Strategy did not include a Dornoch Firth rail crossing in like manner within its priorities but such a scheme is being promoted by a campaigning group with some wider support. However, none of these three transport interventions are currently identified as national priorities for investment in the STPR referred to above. Given these facts, this Local Plan does not therefore identify routes for safeguarding. However, the definition of the settlement development areas tightly around the existing built form and allocated sites will help to maintain options for possible investigation in the future. The section of this chapter dealing with Implementation, Monitoring and Review indicates in broad terms what would need to happen for such schemes to progress

4.34 Economic development opportunities are needed in most communities. Capacity

exists on existing sites or sites are allocated in the Plan for business and/or industry at Dornoch, Golspie, Brora, Helmsdale, Lairg, Ardgay and Bonar Bridge, with some provisions elsewhere including as part of mixed use development schemes. Large areas of reclaimed land created as part of the major fishery port expansion schemes are the centre-piece of economic development opportunities in Lochinver and Kinlochbervie. Diversification initiatives promoting new opportunities for tourism should focus on their harbours and related infrastructure. A major drive towards sustainable economic recovery and employment must be a priority for the agencies and communities in the north and west, embracing a careful mix of land management and resource development, including e-business, welfare/ self-help schemes and home-working.

Supporting Communities

A' Toirt Taic do Choimhearsnachdan

4.35 The priority is to support existing services, address remaining deficiencies and improve the range and quality of facilities, their viability being dependent on a critical mass of people and accessibility to centres. Stemming “leakage” of retail spending and modernising recreation, community hospital and public service facilities, requires strategic investment at locations which offer optimum convenience to Sutherland as a whole, reduce travel and assist sustainability. The Dornoch-Golspie-Brora axis is well placed to ‘compete’ for larger-scale (in a Sutherland context) commercial development and leisure provision. Golspie has become the location of a new Council offices complex by refurbishment of the historic buildings at Drummuie; and work has started on replacement of Migdale Hospital at Bonar Bridge. With substantial investment in health, education and community/leisure services throughout Sutherland, less than 20% of residents now require to travel more than 10 minutes to core services (health, shop, post office, school and filling station). There may be opportunities to develop housing for older people close to health centres, as an integral part of the care in the community regime. Sustaining community transport and mobile and roving services is a vital “lifeline” in the remote, sparsely populated interior: Altnaharra, Achfarry, Kinbrace and Inchnadamph.

4.36 First-time water and drainage facilities have gradually been installed in most communities and a number of further improvements are programmed, for example waste water systems at Edderton. However, further operational deficiencies and shortcomings in the capacity of utility systems impose significant constraints in some key centres. Water supplies at Dornoch (to cater for medium to longer term growth), Bonar Bridge and Ardgay and waste water systems at Melvich and Helmsdale need to be given priority for upgrading. Developer contributions - determined by network capacity studies - are increasingly sought to upgrade connecting infrastructure. In parts of the landward area, the regeneration of townships is hindered by distance to electricity supplies and the high cost of connecting the service. The Council may from time to time make additional information available about constraints affecting development opportunity, such as constraints arising from infrastructure capacity.

Caring for the Heritage A' Gabhail Cùram don Dualchas

4.37 The diverse natural and cultural heritage of Sutherland – its habitats, species, landscape, scenery and artefacts – is a major asset. The most important designated assets are subject of legal protection and the Council has to fulfil certain responsibilities in that regard. However, many other assets are also of value individually and collectively and the Plan seeks to ensure that they are safeguarded. Sutherland's heritage must be protected and promoted to maximise the area's economic prospects, including its appeal to residents, workers, investors and visitors. An integrated and balanced regime of land uses able to draw investment in dependent, "downstream" or support activities is required. This could embrace, for example, forestry and other resources, on and offshore renewable energy and particularly small-scale community-led schemes, archaeological/geological interpretation, countryside access, recreation and outdoor pursuits, wildlife management and traditional activities. Renewable energy projects will be guided by the Council's "Renewable Energy Strategy and Planning Guidelines" (HRES) and, in the case of on-shore wind energy, by the new Highland wide Local Development Plan and new Supplementary Guidance currently being prepared to provide a revised spatial planning framework in accordance with Scottish Planning Policy. The environmental impacts, including landscape impact, of proposals will be a significant consideration.

4.38 This should be based increasingly on community stewardship, excellence in environmental management and sustainable principles and an approach which balances the potential for development and minimizes its impacts on the natural, built and cultural heritage.

Sustainable Communities Coimhearsnachdan Seasmhach

4.39 Sustainable communities will offer choice in housing, local jobs and modern facilities, enhanced focal points or distinctive character, safe and convenient connections, capacity in infrastructure and measures to protect their amenities and setting. The local planning framework may also involve Development Briefs for larger sites or in circumstances where action needs to be co-ordinated.

Sustainable Design Dealbhadh Seasmhach

4.40 Quality design - how development fits and functions - will be essential in all proposals and in all communities. Development should relate well to neighbouring buildings or activities, and sit comfortably with the grain and texture of places, function safely and efficiently, with ease of connection to services for all users and enhance the "public realm". Certain circumstances may be more suited to continuity of patterns or styles, than variety - and vice-versa; but there is always room for excellence and innovation. Well designed places - whether

in urban situations, villages or townships - should be vibrant, legible, stimulating, viable, safe and flexible. The principles of the Council's approved guidance "Designing for Sustainability in the Highlands" are at the heart of a prosperous future and sustainable communities in Sutherland.

Sustainable Services **Seirbheisean Seasmhach**

4.41 Core services and community facilities across Sutherland are, to a large extent, located according to the size and distribution of the population and its accessibility to/distance from the centres at which the services are located. This is supplemented by mobile and roving services to the more remote, most sparsely populated areas. The viability of services and facilities may be dependent on service providers pooling resources and innovating in the delivery of schemes. Deficiencies need to be addressed and the quality and accessibility of services and facilities improved where necessary. In fragile communities this can have a vital effect in strengthening them and putting them on a more sustainable footing. The strategy and policies of this Plan have a part to play in achieving that. At a micro level we have identified that individual developments have a part to play through developer contributions. At a macro level the coordination of the Local Plan with other plans and strategies and the role of the Action Programme will be important.

Implementation, Monitoring and Review **Buileachadh, Sgrùdadh is Ath-bhreithneachadh**

4.42 Implementation of the Local Plan will require action by the Council and by many other organisations and individuals. The Council does not control all of these matters but will rely on collaborative working and liaison. Delivery of certain projects, schemes and aspects of the Plan's 'Vision' would in particular be dependent upon other priority-setting and decision-making processes that are wholly or partly outside the Council's control and have not yet been undertaken. For example:

- Any case for a major transportation scheme should result from an appraisal using the Scottish Transport Appraisal Guidance (STAG). Progressing such schemes will be dependent upon their inclusion in the appropriate list of priorities and commitment to funding. Whilst regional priorities were set out in the HITRANS Strategy, the Scottish Government's subsequent Strategic Transport Projects Review (STPR) has not included them all in its national priorities for investment. The Council is in the process of reviewing and replacing its Local Transport Strategy (LTS); the LTS will need to identify priorities for local delivery in the light of what the HITRANS Strategy identified and of what has and has not been included in the STPR.
- Any consideration of a National Park for the whole or part of Sutherland would have to follow the procedures as set out in the National Parks (Scotland) Act 2000 whereby the Scottish Ministers in the first place make a 'National Park proposal'.
- Any potential to bid for World Heritage Site status for the Flow Country would be considered once the review of the Tentative List has commenced and the requirements are clearer.

As set out in one of the plan's objectives, an Action Programme will set out how, when and by whom specific actions will be undertaken and will form a basis for the monitoring of action.

Monitoring progress on the implementation of the Local Plan will be vital and where necessary will lead to policies and proposals being reviewed. We will in particular monitor the delivery of homes and jobs. We will prepare a Monitoring Report on a regular basis, drawing on a number of sources of information including our own Housing Land Audit and Business & Industrial Land Audit. If sites prove to be ineffective in delivering growth within the timescales required then we will seek to work with the interested parties to establish the reasons why (such as infrastructure issues) and, if necessary, propose the de-allocation of sites and allocation of alternative sites as part of future Plan review. It will also be important to monitor retail development, indicators of the health of town centres, village facilities, jobs growth and changes in employment, housing affordability and need and changes in the profile of Sutherland's population. There will also be a range of matters concerning Sutherland's environment that will be monitored as required by the Environmental Report. This Local Plan will eventually be reviewed and replaced by a new-style Local Development Plan under the Planning etc (Scotland) Act 2006 as referred to in the Council's Development Plan Scheme.

C – Vision

C – Lèirsinn

4.43 The Local Plan's long-term Vision for Sutherland can be summed up under four themes. Sutherland should be:

- A Regenerating Place: A Network of Strong Communities
- A Competitive Place
- A Connected and Accessible Place
- A Place of Outstanding Heritage: Safe in the Custody of Local People

4.44 We cannot be certain about everything that will happen in the Plan area in the coming years and Sutherland's future depends upon the actions not only of the Council but of many other organisations and individuals. However, if there is success in delivering the Strategy of this Plan (set out in section 4B) then we think there could be success in achieving the Vision set out here. So what in particular might characterise Sutherland in about twenty years' time if that were the case?

4.45 A Regenerating Place: A Network of Strong Communities

4.45 Àite ag Ath-ùrachadh: Lìonradh de Choimhearsnachdan Làidir

a. A Sutherland population that has grown to exceed 15,000 and in particular includes significant numbers of young and working age persons in support of the Community Plan, with enhanced opportunities for education and employment locally.

b. Excellence in design of new development and regeneration, founded in "sustainable principles".

- c.** Growth of the urban centres in the A9 corridor, driven by proximity to Inverness and the Inner Moray Firth sub-region and the quality of life offered. The east coast centres (Golspie, Dornoch and Brora) being marketed on their unique assets and vying for major new investment in commercial and community facilities.
- d.** The main centres in central Sutherland (Ardgay, Bonar Bridge and Lairg) having enhanced positions as service centres, placing these communities on a more sustainable footing.
- e.** Improved economic prospects of the west coast ports (Lochinver and Kinlochbervie), closely tied with development of reclaimed land and with development of housing and infrastructure for community growth proceeding.
- f.** The north and west coast communities (particularly Durness and Scourie), reinforced as local and visitor focal points on the A838.
- g.** Generally across Sutherland and along the north coast particularly, local housing needs being met whilst respecting the capacity of services and the importance of land for crofting. Population gains will be evident as ‘fragility’ is reduced.
- h.** Bettyhill, Tongue and Helmsdale continuing to support viable services and meeting local housing needs effectively.
- i.** Small villages and townships accommodating small-scale development which strengthens and supports those communities.
- j.** Most communities well-equipped with community and health/day facilities and halls, with investment in new or upgraded provision where necessary.
- k.** Communities increasingly seeing new 21st Century “fit-for-purpose” schools at the centre of their continued rejuvenation, providing a focus for social and community life. The sparse population and distance continuing to sustain the more remote schools.
- l.** One-stop-shops proving to be a model for viable rural services, for example local shops and filling stations and community run business co-operatives.
- m.** Local Gaelic traditions continuing to be an influence on community life, education and regeneration.

4.46 A Competitive Place

4.46 Àite Farpaiseach

- a.** An exceptional environment, thriving local communities and clean energy sources which prove an important incentive to business location.
- b.** The main east coast settlements complementing, rather than competing with one another for investment and new economic opportunities and that have Business Parks and Industrial

Parks providing modern accommodation, in sustainable locations within or near to the settlements.

- c.** Strong employment ties with Inverness and the Inner Moray Firth sub-region - and increasingly Caithness; a Sutherland economy that is not self-contained. Sutherland will be playing its part in the successful implementation of the Caithness & North Sutherland Socio-Economic Strategy addressing the consequences of the decommissioning of Dounreay.
- d.** Choice in public transport which makes for efficient commuting, although a high proportion of the workforce in fact employed within the Plan area.
- e.** The main centres in central Sutherland supporting thriving local enterprises.
- f.** IT/broadband coverage and performance improvements, driven through the partnership project work of the Council and other organisations, having encouraged investment with access to the global market place. Small-scale, technology-based e-businesses springing up.
- g.** Secondary and processing streams adding value to large-scale development of resources.
- h.** The Shin and Kildonnan forests in central Sutherland could be supplying timber processing and bio-mass plants to the south, for which important railheads (Lairg and Kinbrace) continue.
- i.** Traditional highland sporting estates embracing local enterprise.
- j.** West coast port communities that have diversified with emphasis on new tourism ventures, small businesses and outdoor activities. Fishery stocks could be replenishing, rekindling interest in new locally-registered fishing boats.
- k.** Tourism and the leisure and recreation industries continuing and growing in importance to help sustain many communities. Specialist heritage excursions and sports holidays encouraging important investment in the Area's accommodation, facilities and infrastructure. Ever increasing visitor numbers drawn by Sutherland's assets, success built on the North Highlands Initiative "Pleasure in the Extreme". A major contribution to this being made by the North-West Highlands European Geopark and by the experience of 'wildness' available in parts of Sutherland (distinguishing between actual and perceived wildness). Enhanced interpretation of heritage assets and promotion of heritage trails.
- l.** Mixed agriculture and farm-forestry dominating in the fertile seaboard and northern straths, supported by low intensity production, sustainable practices and market-led incentive schemes.
- m.** Traditional design values reinvigorating crofting areas.
- n.** Continuing local agricultural and crofting traditions and services.
- o.** Strengthening of crofting townships and the possibility of new crofting townships, including development of forest crofts.
- p.** Job creation being sustained in the longer term.

q. Wind farms, developed in accordance with HRES and the new HLDP and SG for On-Shore Wind Energy, could be exporting to the National Grid, if major improvements in transmission capacity are achieved. Success in the siting and impact of turbines, and their integration with community, wildlife and landscape.

r. Exploration of opportunities to potentially gain economic and/or community benefit from Sutherland's valuable natural resources, such as through working its mineral resources, renewable energy generation (including small-scale community schemes) and the possibility of innovative combined schemes. If any such proposals come forward formally, their merits, benefits and impacts would need to be considered carefully in respect of society, economy and environment. This would include Environmental Impact Assessment where required. Large development proposals or those for a special use may well raise strategic issues of at least Highland significance and possibly be driven by national needs and in that case will need to be guided by higher level strategic policies.

4.47 A Connected and Accessible Place

4.47 Àite Co-cheangailte is Ruigsinneach

a. A9 improvement schemes - notably the long awaited by-passes of Golspie and Brora. These were identified in the HITRANS Strategy with congestion relief, community safety and shortened journey times anticipated. Further exploration through review of Highland-wide, regional and national planning and transportation strategies, may be appropriate if new priorities are identified and with due consideration to the economic, social and environmental impacts of such schemes. In the event of such schemes being favoured and any formal preferred and programmed routes being announced, the Development Plan of the time could protect such routes.

b. Integrated transport solutions for passengers and for freight: frequent community bus routes giving more convenient access to work and services; a network of cycle routes, preferably segregated linking the main communities; promotion of tourist-based cycle routes; a significant increase in rail-freight which consolidates Lairg as a major transit/ break-of-bulk and distribution "hub" for the north-central Highlands as part of a network of strategically located sidings with loading facilities (serving the import and export needs of the forestry, farming, fuel supply, aggregates and renewables industries) which could be underwritten by a consortium.

c. Substantial increase in passenger numbers on the Far-North rail line as efficiencies reduce the Inverness-Wick journey time. A sustained, full peak-time return Invernet commuter service extending to Lairg, Ardgay and Bonar Bridge. The rail service as a key driver in their economic prospects, as well as places further north and west. The possibility of a Dornoch Firth rail crossing (which is being promoted by a campaigning group with some wider support) may have been explored further through the preparation and review of Highland-wide, regional and national planning and transportation strategies, with due consideration given to the economic, social and environmental impacts of such a scheme. In the event of such a scheme being favoured and any formal preferred and programmed route being announced, the Development Plan of the time could protect such a route.

- d.** Maintaining and pursuing the case for twin-tracking the 'lifeline routes' or 'locally important roads' to the north and west coast communities and seeking improvement of other roads which are under stress, such as the Dornoch-Embo road, and progress made with route enhancement scheme(s) such as the A838, where identified or confirmed as priorities.
- e.** Deficiencies in the water and waste-water networks across Sutherland relieved through on-going investment.
- f.** The Area's expertise and associations with hydro-electricity generation underpinning the development of renewables. Wave farm technology earmarked for testing, community-based energy systems in place, and bio-fuel technologies having enabled residual agricultural and forestry products to be utilized.

4.48 A Place of Outstanding Heritage: Safe in the Custody of Local People **4.48 Àite le Dualchas Air Leth: Sàbhailte ann an Lànhan an t-Sluaigh Ionadail**

- a.** Sutherland offering a superlative visitor experience.
- b.** Marketing of low-impact specialist pursuits, ecotourism and field activities in the North-West Highlands European Geopark, underpinned by its endorsement by UNESCO. Across Sutherland, enhanced interpretation of heritage assets and promotion of heritage trails that respect the need to safeguard the assets.
- c.** Community-led campaigning and critical assessment of the economic and social benefits could examine the possibility of National Park status. Major incentives would derive from the creation of jobs, community and resource development and conservation management.
- d.** The core Flow Country, subject of sensitive management regimes, could be part of a major ecological restoration and bio-diversity programme with advancement from 'tentative' to 'confirmed' World Heritage status.
- e.** The important contributive role of Sutherland's National Scenic Areas to the future well-being of the area being recognised and managed effectively. The Dornoch Firth as a unique landscape and ecosystem, supporting organic farm produce, sensitive sporting practices, land and water-borne recreation, abundant wildlife habitats, inshore fisheries and specialist pursuits. This is the "Green Firth" - a marketing cachet drawing custom across the globe and a fitting setting for the world-class Skibo Castle and Royal Dornoch Golf resorts.
- f.** Recent development of flood-sensitive uses located away from floodplains and tidal "buffers", allowing scarce resources for protection works to be targeted at vulnerable communities. Sutherland's river systems are part of the River Basin Management Plan prepared under the EC Water Framework Directive. An integrated approach is improving water quality, maximizing land management, regenerating habitats and protecting salmon fisheries.

- g.** Sutherland hosting national events and known as a world-class venue, for example Dornoch boasting an International Golf Academy, Golspie's Highland Wildcat Routes providing a National Mountain Biking and Orienteering circuit and Regatta events being drawn to the West Coast.
- h.** Forest design improvements, and effective safeguarding for both natural and designed landscapes, for habitats and species, for geological interests and for archaeological interests.
- i.** The possibility of strategic Regional Woodland Parks serving the market for outdoor land and water based pursuits, supporting accommodation and facilities in the south east and central parts of Sutherland (around Golspie and Lairg) whilst the Ferrycroft Countryside Centre at Lairg attracts important numbers of visitors with woodland and other interpretation. Community Woodland Schemes could be establishing and maturing, such as in and around Dornoch and Brora.
- j.** Under the Land Reform legislation, communities promoting land restoration, conservation and public access schemes. Core Paths, locally-managed woodland and small-scale recycling schemes could be common-place.
- k.** Recognition of the value and role of biodiversity, coastal and marine areas, native woodlands, geodiversity and remote and wild landscapes (distinguishing between actual and perceived remoteness or wildness).
- l.** Sutherland being a place people value... and they aim to keep it that way.

5 General Policies

5 Poileasaidhean Coitcheann

5.0.1 The fundamental part of this Plan strategy is to direct the right sorts of development to the right places, thereby *making better places*. The Plan sets out below a range of general policies to achieve its objectives.

5.0.2 Users of the plan should note that each proposal will be assessed on its individual planning merits having regard to the relevant development plan policies and other material considerations. Compliance with a single policy will not necessarily indicate that a proposed development is acceptable.

5.1 Settlement Development Areas

5.1 Sgìrean Leasachaidh Bhailtean

5.1.1 The Plan highlights the importance of supporting existing communities. As a result, we have defined *Settlement Development Areas*. These are the preferred areas for most types of development, including housing. This is consistent with the Structure Plan Policy H3, which says that housing development will generally be within existing and planned new settlements. Because of this, we hope to meet the majority of the housing requirement, set out in the Vision / Strategy, within the *Settlement Development Areas*. This makes best use of existing infrastructure and services and protects the character of the surrounding countryside. When defining settlement development areas we have taken account of a number of things, including:

- the quality of neighbouring croft or agricultural land;
- the type of land;
- the ability of the landscape to allow for development;
- the pattern of existing settlements; and
- the availability of infrastructure.

5.1.2 The Plan aims to allow enough room for future development (including infill development) while recognising the physical limits due to the landscape and ground conditions. As a result, where possible we have drawn the boundaries of the settlement development areas relatively widely around the existing built-up areas. We have also had regard to the Sutherland and Caithness Landscape Character Assessment (see Appendix 3) and the Sutherland Landscape Capacity Study⁴ in preparing the Plan. Where necessary the landscape character assessment for the area will also be referred to as a material consideration when examining individual development proposals.

5.1.3 For each of the *Settlement Development Areas*, the Plan will set out a number of *Objectives* which will include *Development Factors* and *Developer Requirements* which will need to be taken into account in that particular area. This will include for example, important views which should be retained or other improvements required.

Policy 1 Settlement Development Areas

We will support proposals within *Settlement Development Areas* (as shown on the Proposals Map insets) if they meet the requirements of Structure Plan Policy G2 Design for Sustainability, as shown on the page following Policy 6 of this Plan.

We will also judge proposals in terms of how compatible they are with the existing pattern of development and landscape character, how they conform with existing and approved adjacent land uses, and the effect on any natural, built and cultural heritage feature within these areas (see Policy 4, Appendix 1 and Background Maps).

Developments which are judged to be significantly detrimental in terms of the above criteria shall not accord with the Local Plan.

⁴ SNH commissioned report No. 147 "Sutherland landscape capacity study: an analysis of housing potential" (2006)

5.2 Land Allocations

5.2 Sònrachaidhean Talmhainn

5.2.1 The Vision / Strategy recognises that most of the future growth in the Plan area will be in the main settlements. These include the communities:

- which have experienced the greatest development pressures;
- where the main services are;
- where the best transport links are; and
- where larger-scale industrial and business development is the most practical.

5.2.2 Within the *Settlement Development Areas* we have allocated sites for the following types of land use, in the table below.

Allocation	Type of Land Use
H	Housing
AH	Affordable Housing
C	Community
OS	Public Open Space
MU	Mixed Use
B	Business
I	Business and Industry

5.2.3 The Plan also identifies a number of *Developer Requirements* which are associated with these sites and which must be addressed by developers in taking proposals forward on them. These have been identified through consultation or through the Strategic Environmental Assessment or Appropriate Assessment processes. In some cases the Action Programme which will accompany the Plan will identify the need for a development brief or master plan to be prepared prior to the site being developed.

5.2.4 Indicative site capacities are given where appropriate in the settlements section of the Plan for housing or part housing allocations. At planning application stage a more detailed appraisal will be undertaken of the actual site capacity in the context of assessing whether the developer's proposed scheme is appropriate.

Policy 2 Development Factors and Developer Requirements

Developers must take account of the details set out on the Proposals Map insets. We will give particular consideration to the total effect of private water and sewage systems.

5.3 Wider Countryside

5.3 An Dùthaich as Fharsainghe

5.3.1 It is recognised that given the rural nature of much of the Plan area, there will continue to be demand for development outwith the settlement development areas. The Local Plan seeks to balance recognising the countryside as an economic resource with development potential against the possible effect of any development on the natural, built and cultural heritage of the area.

5.3.2 Development can have a significant impact upon the character of the landscape. Proposals should be sympathetic to this and landscape is a key consideration under Policy G2 of the Structure Plan. The impact will depend upon the type of development and the type of landscape character present and there may be potential for mitigation to be included in proposals. The Caithness & Sutherland Landscape Character Assessment (1997) broadly classifies the types of landscape character present and provides advice about assessing proposals. Where necessary it will be referred to as a material consideration when examining proposals. Landscape impact is a consideration throughout the Plan area but is particularly important outside Settlement Development Areas where sites are not allocated for specific uses in the Plan and where there is generally less intensive development already as part of the landscape, or where there is no development at all (see Appendix 3 landscape character assessment). For some existing settlements the Plan identifies particular importance of or sensitivity with their settings. In those areas of the wider countryside, development will only be supported if it does not harm the settlement setting.

5.3.3 Development in the wider countryside may help support communities in fragile areas (see glossary). There are in particular many crofting and other 'townships' in the Plan area, not defined by Settlement Development Areas but where there is significant settlement within a locality and which is identifiable loosely as an established rural community. Development which is considered appropriate in the countryside and which would be compatible with existing townships might be located in those communities with particular advantage (if that is compatible with other policies of the Development Plan), as it may help to support existing communities through sustainable development. The Council may from time to time make additional information available about constraints affecting development opportunity in the wider countryside, such as constraints arising from infrastructure capacity.

5.3.4 The general approach to development outwith the settlement development areas is set out in Policy 3. However, it should be read in conjunction with all other relevant policies of the Plan; it is particularly important to highlight that General Policies 3, 4 and in the case of housing development 16 are related and should be read together.

Policy 3 Wider Countryside

Development in the wider countryside including crofting townships may be supported where it:

- helps to maintain and strengthen local population and services, particularly within communities currently experiencing difficulty (fragile areas);
- is sympathetic to existing patterns of development in the area;
- is compatible with landscape character and capacity;
- is located, if possible, to avoid the loss of locally important croft land;
- is of an acceptable design and;
- is adequately serviced (to address drainage constraints and avoid undue public expenditure or infrastructure out of keeping with the rural character of the area).

Note: Housing in the countryside of the hinterland around towns (see glossary, Proposals Map and Structure Plan Policy H3) will be assessed in the context of Policy 16: Housing in the Countryside.

5.4 Natural, Built and Cultural Heritage

5.4 Dualchas Nàdarra, Togte is Cultarail

5.4.1 The outstanding natural, built and cultural heritage of the Plan area has to be fully considered when development proposals come forward throughout the area. The Plan identifies three categories based on the type and importance of natural, built and cultural heritage they contain. These categories are local and regionally important, nationally important and internationally important.

5.4.2 Local and regionally important features are mostly identified by The Council, and contribute to the identity of the Plan area.

- Areas of Great Landscape Value
- Category B and C(S) listed buildings
- Sites and Monuments Record archaeological sites
- War memorials
- Settlement setting
- Inventoried Semi-Natural Woodland and Long-Established Woodland (Plantation)
- Amenity trees
- Views over open water
- Remote landscapes of value for recreation
- Locally important croft land

- Sites of Local Nature Conservation Interest
- Geological Conservation Review Sites and Regionally Important Geological Sites
- Isolated coast
- Archaeological Heritage Areas
- Conservation Areas

5.4.3 Nationally important natural, built and cultural heritage features are identified by national organisations or by The Council under national legislation.

- Scheduled Monuments
- Category A listed buildings
- National Nature Reserves
- Tree Preservation Orders
- Sites of Special Scientific Interest
- Inventoried Gardens and Designed Landscapes
- National Scenic Areas
- Inventoried Ancient Woodland and Long-Established Woodland (Semi-Natural)

5.4.4 Internationally important natural and cultural heritage features are identified under government directives and European conventions.

- Special Protection Areas (including proposed)
- Special Areas of Conservation (including candidate)
- Ramsar sites

5.4.5 These categories and the features included within them may be updated should circumstances change during the Plan period.

This policy must be read in conjunction with the Background Maps and the policy frameworks identified in Appendix 1.

5.4.6 In assessing development proposals, the Council will consider the level of importance and nature of these features, the nature and scale of development, and the likely effect on the feature including, where appropriate, its setting. Policy 4 therefore sets out the tests against which all development which affects these heritage features must be assessed. Only the most important feature is shown on the Proposals Map, and other features may exist beneath these. Where necessary, Appropriate Assessment (assessing the likely significant effects a Local Plan will have on a range of European designated sites) is undertaken for allocations prior to adoption of the Local Plan, however individual Appropriate Assessments may be required to be completed for proposed developments prior to determining planning applications.

5.4.7 There are parts of Sutherland which are fragile areas (see glossary) and there may be opportunities through some developments to support communities in fragile areas who are having difficulties in keeping their population and services. This can be done by helping to repopulate communities and strengthening services.

5.4.8 Note that the individual Proposals Maps do not show coverage of these Natural, Built and Cultural Heritage features within the settlement boundaries to allow for the clear

illustration of the proposed land allocations. However, the full extent of these features, including their coverage within settlements, can be found on the Background Maps which are contained in the Map Booklet.

5.4.9 The impact on all natural, built and cultural heritage features must be addressed however when considering and assessing development proposals, and the Background maps which are contained in the Map booklet of the Plan set out the locations of all these different features in so far as they have been mapped digitally on our system.

5.4.10 Features identified by the Council as being present at the time a proposal is considered and which are of the types indicated under the policy, but which have not yet been mapped, will still be subject of protection under this policy. Also, the boundaries of some features (such as Areas of Great Landscape Value) are in the process of being refined and reviewed or may be during the lifetime of the plan and Appendix 1 indicates the current position.

Policy 4 Natural, Built and Cultural Heritage

All development proposals will be assessed, taking into account any impact on the feature and its setting, in the context of the policy framework detailed in Appendix 1. The following criteria will also apply:

1. For features of **local/regional importance** we will allow developments if we believe that they will not have an unacceptable impact on the amenity and heritage resource.
2. For features of **national importance** we will allow developments that can be shown not to compromise the amenity and heritage resource. Where there may be any significant adverse effects, these must be clearly outweighed by social or economic benefits of national importance. It must also be shown that the development will support communities in fragile areas who are having difficulties in keeping their population and services.
3. For features of **international importance** (Natura 2000 (SPA, SAC) and Ramsar sites), developments likely to have a significant effect on a site, either alone or in combination with other plans or projects, and which are not directly connected with or necessary to the management of the site for nature conservation will be subject to an appropriate assessment. Where we are unable to ascertain that a proposal will not adversely affect the integrity of a site, we will only allow development if there is no alternative solution and there are imperative reasons of overriding public interest, including those of a social or economic nature. Where a priority habitat or species (as defined in Annex 1 of the Habitats Directive) would be affected, development in such circumstances will only be allowed if the reasons for overriding public interest relate to human health, public safety, beneficial consequences of primary importance for the environment, or other reasons subject to the opinion of the European Commission (via Scottish Ministers). Where we are unable to ascertain that a proposal will not adversely affect the integrity of a site, the proposal will not be in accordance with the development plan within the meaning of Section 25(1) of the Town and Country Planning (Scotland) Act 1997.

Note: Whilst Appendix 1 groups features under the headings international, national and local/regional importance, this does not suggest that the relevant policy framework will be any less rigorously applied. This policy should also be read in conjunction with the Background maps.

5.5 Affordable housing

5.5 Taigheadas aig Prìs Ruigsinneach

5.5.1 The Council's Local Housing Strategy identifies the existence of unmet housing need in the Plan area and its Delivery Plan seeks opportunities to increase the supply of both affordable rented housing and low cost affordable houses. To help meet need for affordable homes, the local plan aims to make sure that new housing development makes a contribution towards the supply of affordable housing. This applies to development on both allocated and unallocated sites. The Council's Supplementary Planning Guidance on Affordable Housing, in its revised form (2008), reflects the policy in this Plan and provides guidance as to its application.

5.5.2 The Local Housing Strategy will indicate any areas where a contribution of more than 25% may be expected. It will also indicate any particular tenure split required for affordable housing in order to best meet needs.

Policy 5 Affordable Housing

In accordance with the Supplementary Planning Guidance on Affordable Housing, on sites allocated for housing with an indicative overall capacity of four or more houses the Council will expect to either negotiate a Section 75 Agreement with the landowner(s) and other interested parties, or utilise other mechanisms to provide for a contribution towards affordable housing (as defined in the Guidance), such contribution normally being a minimum of 25%. Negotiations will be subject to market and site conditions, and the contribution may be in the form of land, housing units or a financial contribution.

On these allocated sites, and to prevent the subdivision of larger plots, where an application is made for less than four houses, developers will be expected to provide a financial contribution in proportion to the number of units proposed, and a Section 75 agreement (or other mechanisms) will be required to ensure that any further development on the site will include an appropriate proportion of affordable housing.

This will also apply to proposals for development on sites not allocated for housing within this Local Plan and which would be expected to accommodate four or more houses at density levels consistent with the existing settlement or density patterns. When making decisions on development proposals we will take account of other policy considerations, such as the level of importance of, and the effect on, the natural, built and cultural heritage (see Appendix 1 and Background Maps).

Proposals which include affordable housing should be carefully designed to fully integrate the affordable housing plots as part of a single, overall development of the site and the affordable homes should be indistinguishable from the general market homes in terms of standard of design and average density.

In the landward areas, a contribution towards affordable homes attributed against the primary landholding, will apply in respect of every fourth dwelling granted planning permission, within that same landownership.

5.6 Designing for Sustainability

5.6 A' Dealbhadh airson Seasmhachd

5.6.1 The Planning etc. (Scotland) Act 2006 requires the planning authority to exercise its development planning function with the objective of contributing to sustainable development. Scottish Planning Policy makes it clear that the planning system has an important role in supporting the achievement of sustainable development through its influence on the location, layout and design of new development. Highland Structure Plan Policy G2 sets out the requirement for all development to be designed for sustainability. As a result, the Council will normally require planning applicants to demonstrate, by means of a Sustainable Design Statement (SDS), that their proposals take account of sustainable design practice. For example, applicants will be expected to investigate the use of grey water and micro renewable energy systems.

5.6.2 The Council has developed a Development Plan Policy Guideline on Designing for Sustainability to provide further advice to applicants about what will be assessed. As part of the implementation of the Guideline, we will develop further guidance on the level of detail sought in SDSs for various thresholds sizes and types of development. By raising the sustainability 'rating' of new development across Sutherland there may be opportunity to promote an uplift in the standard of services and facilities generally, for example in waste water treatment. A minimum threshold will be set to exclude very minor developments.

5.6.3 The purpose of this guidance is to support the preparation of an SDS by those involved in applying for planning permission. It is the Council's intention that the statements will be used as a planning tool throughout the Highland Area to meet the requirements of the Planning etc. (Scotland) Act 2006. In introducing the SDS requirement the Council's primary focus will be to ensure that planning applicants reap the benefits of sustainable design, while minimising the extra effort involved in preparing a planning application.

5.6.4 The requirement for submission of a design statement is supported by the secondary legislation in regard to Development Management.

5.6.5 The Council is preparing further policy within the Highland wide Local Development Plan taking into account the need to meet the requirements of the Climate Change (Scotland) Act 2009, the more recent Scottish Planning Policy and PAN 84 Reducing Carbon Emissions in New Development.

Policy 6 Designing for Sustainability

We will judge development proposals against a 'Design for Sustainability' statement where developers have been required to submit one with their planning application in line with the implementation of the Development Plan Policy Guideline on Designing for Sustainability.

THE HIGHLAND STRUCTURE PLAN POLICY G2 DESIGN FOR SUSTAINABILITY
POILEASaidh PLANA STRUCTAR NA Gàidhealtachd G2 Dealbhadh Airson
Seasmhachd

Policy G2 is to be found in the Highland Structure Plan and is reproduced here for ease of reference.

Policy G2 Design for sustainability

Proposed developments will be assessed on the extent to which they:

- are compatible with service provision (water and sewerage, drainage, roads, schools, electricity);
- are accessible by public transport, cycling and walking as well as car;
- maximise energy efficiency in terms of location, layout and design, including the utilisation of renewable sources of energy;
- are affected by significant risk from natural hazards, including flooding, coastal erosion, land instability and radon gas, unless adequate protective measures are incorporated, or the development is of a temporary nature;
- are affected by safeguard zones where there is a significant risk of disturbance and hazard from industrial installations, including noise, dust, smells, electro-magnetism, radioactivity and subsidence;
- make use of brownfield sites, existing buildings and recycled materials;
- impact on individual and community residential amenity;
- impact on non-renewable resources such as mineral deposits of potential commercial value, prime quality or locally important agricultural land, or approved routes for road and rail links;
- impact on the following resources, including pollution and discharges, particularly within designated areas:

habitats	freshwater systems
species	marine systems
landscape	cultural heritage
scenery	air quality;
- demonstrate sensitive siting and high quality design in keeping with local character and historic and natural environment and in making use of appropriate materials;
- promote varied, lively and well-used environments which will enhance community safety and security and reduce any fear of crime;
- accommodate the needs of all sectors of the community, including people with disabilities or other special needs and disadvantaged groups; and
- contribute to the economic and social development of the community.

Developments which are judged to be significantly detrimental in terms of the above criteria shall not accord with the Structure Plan.

5.7 Waste Water Treatment

5.7 Leigheas Uisge Òtrachais

5.7.1 The best way to deal with the effluent generated by larger developments and/or settlements is by means of a 'publicly' maintained network of sewers and related sewage plants. SEPA as the relevant environmental agency has adopted a policy to encourage such treatment.

5.7.2 However, it is necessary to allow other private sewage treatment options in certain circumstances, in particular, where settlements are smaller, more dispersed in pattern and often not served by adequate existing or programmed public sewage systems. Developers should refer to SEPA's Policy on the Provision of Waste Water Drainage in Settlements, for information.

Policy 7 Waste Water Treatment

Connection to the public sewer is required for all new development proposals within settlement development areas (with a population equivalent of more than 2000) or wherever single developments equivalent to 25 or more units are proposed.

In all other cases a connection to the public sewer will be required, unless the applicant can demonstrate that:

- 1) the development is unable to connect to public sewer for technical or economic reasons; and
- 2) that the proposal is not likely to result in or add to significant environmental or health problems.

The council's preference is that any private system should discharge to land rather than water.

For all proposals where connection to the public sewer is not currently feasible and Scottish Water has confirmed public sewer improvements or first time public sewerage within its investment programme that would enable the development to connect, a private system would only be supported if:

- the system is designed and built to a standard which will allow adoption by Scottish Water;
- the system is designed such that it can be easily connected to a public sewer in the future.

Typically this will mean providing a drainage line up to a likely point of connection. The developer must provide Scottish Water with the funds which will allow Scottish Water to complete the connection once the sewerage system has been upgraded..

5.8 Waste Management

5.8 Stiùireadh Sgudail

5.8.1 Sustainable waste management is an important consideration for The Council. Scottish Planning Policy states that a sustainable approach to waste management planning relies on a number of objectives including those reflected in the Scottish Government's (emerging) Zero Waste Plan and the waste hierarchy, reduced reliance on landfill and the precautionary and proximity principles. The waste hierarchy favours prevention over reuse, recycling, recovery then disposal. The proximity principle requires waste to be dealt with as close as possible to where it is produced. This means taking local responsibility for the treatment and disposal of waste. Planning for waste management infrastructure to meet all waste needs within each local authority area is a key part of fulfilling this responsibility.

5.8.2 A key role of the Plan is to direct waste management uses to the most appropriate locations, which are generally either existing or former waste management sites or on business and industrial land where they are compatible with existing or proposed uses. A number of existing and former waste management sites are shown on the Background Mapping. Another key role of the Plan is to seek the inclusion of arrangements for sustainable waste management wherever relevant as part of all new development, for example in proposals for new housing or industrial premises. Use of the Council's Development Plan Policy Guideline on Designing for Sustainability will be important in fulfilling that role.

5.8.3 The Highland Structure Plan sets out the strategic policy framework for all types of waste management use, but the Highland Area Waste Plan, the National Waste Plan and the National Waste Strategy are very important considerations. Regard must also be had to Scottish Planning Policy, particularly as it is more recent. The Scottish Government's emerging plans for 'zero waste Scotland', which follow production of National Planning Framework 2, together with the Council's own emerging Municipal Waste Strategy may provide further material considerations. Further guidance on issues to be considered as part of waste management proposals has been produced by SEPA.

Policy 8 Waste Management

Proposals for waste management facilities will be assessed in line with the approach set out within the Highland Structure Plan subject to taking into account the Highland Area Waste Plan, the National Waste Plan, the National Waste Strategy, Scottish Planning Policy and where relevant SEPA's Thermal Treatment Guidelines. Developers will be expected to demonstrate how these considerations have been taken into account.

Waste management facilities will be supported:

- on business or industrial land in line with the Highland Structure Plan; or
- in the case of community composting facilities and recycling points, in other locations close to source;

provided that they are compatible with surrounding uses and meet other criteria relating to environmental impact and transportation.

Existing or former waste management facilities and their sites shall be safeguarded, except where demonstrated to be surplus or no longer suitable to meet future requirements. Development proposals on or adjacent to the site of such a facility will be assessed against the National Waste Strategy, the National Waste Plan, and the Highland Area Waste Plan, and will be subject to consultation with SEPA. If the proposed development would adversely affect the operation of the waste management facility, or would be likely to cause the site of the facility to be unavailable or unsuitable for future waste management purposes, for which it will be required, the proposed development will not be favoured.

In considering proposals for any type of new development, the Council will also take into account the extent to which they effectively manage and promote the reduction, reuse, recycling and recovery of waste during the construction and operation of the development including any measures for waste separation and collection at source.

5.9 Flood Risk

5.9 Cunnart bho Thuil

5.9.1 The risk of flooding from all sources is likely to increase with projected climate change. It is therefore important not to allocate land at risk for inappropriate development to ensure compliance with Scottish Planning Policy. Flood risk has been an integral to the choice of site allocations. Additional guidance on these issues - including maps of the medium to high flood risk areas (1 in 200 years or greater than 0.5% annual probability of flooding) - may be sought from the Scottish Environment Protection Agency (SEPA). These maps are the starting point for the consideration of the flood risk implications of development proposals.

5.9.2 Additionally we will have regard to any other information known to be available, especially any more detailed or up-to-date assessments of flood risk, in order to take account of the potential for flooding from all sources as required by Scottish Planning Policy. A Flood Risk Assessment is generally necessary in areas of medium to high flood risk and may be necessary in other areas if local flood information and/or the sensitivity of the proposed use suggests a potential risk. Examples of circumstances when flood risk assessment may be required include where a site is partially within, bordering or adjacent to the medium to high flood risk area, a small unmodelled watercourse flows within or adjacent to the site, there is historical flooding known on the site or the development may have an impact on flooding elsewhere e.g. "down slope".

5.9.3 Flood Risk Assessments shall accompany planning applications when required by the Council. This is an assessment carried out to predict and assess the probability of flooding for a particular site or area and recommends mitigation measures including maintenance.

Policy 9 Flood Risk

Development proposals should avoid flood plains, other land alongside watercourses, land with drainage constraints or otherwise poorly drained, and low lying coastal land areas susceptible to flooding.

Development proposals in areas of medium to high flood risk (as defined in the glossary), will need to demonstrate compliance with Scottish Planning Policy through the submission of a Flood Risk Assessment. Limited exceptions apply for infrastructure works (see paragraph 203 of Scottish Planning Policy).

In other areas, a Flood Risk Assessment which demonstrates compliance with Scottish Planning Policy may also be required if local flood information and/or the sensitivity of the proposed use suggests a potential risk.

Developments may also be permitted where they are in accord with the flood prevention or management measures as specified within a Local Plan allocation or a Development Brief. Any developments, particularly those on the flood plain, should not compromise the objectives of the EU Water Framework Directive.

Note: in defining areas at risk from flooding the council will rely on SEPA's indicative flood risk maps, records of previous floods, other sources and advice from consultees

5.10 Other Development Considerations - Physical Constraints

5.10 Beachdachaidhean Leasachaidh Eile - Bacaidhean Corporra

5.10.1 There are a range of public health and safety factors that need to be assessed when considering development proposals. These are listed in the policy below and cover issues such as noise, odour, slope stability and pollution.

5.10.2 Sources for further information on the physical constraints listed, where available, are given in footnotes. These maps may be updated should circumstances change during the Plan period.

Policy 10 Physical Constraints

Subject also to the principle of development, developers will be expected to demonstrate appropriate mitigation, to the satisfaction of the Planning Authority, if their proposals affect or are affected by the constraints below (where appropriate these are shown on the background maps). Where relevant developers will need to have regard to both existing constraint features and to those consented but not yet built.

- Poorly drained areas
- Wind farms/turbines ⁵
- ENA Standards 43-8: "Overhead Line Clearances" (distance from power lines)⁶
- Areas of excessive slope (with a gradient of over 1 in 7)
- Regard must be had to the safeguarding of new, existing and former waste sites (in accordance with Scottish Planning Policy) as well as to any potential impact that the operation of facilities on such a site might have on the proposed development
- Areas that could erode or subside
- Safeguard areas around sewage treatment works ⁷
- Within 400m of an active quarry
- Any waters that an EU Directive applies to in accordance with PAN79
- Areas affected by Radon Gas
- Hazardous Sites as shown on the Hazard Sites consultation area map
- Radio Telecommunications Services
- HSE Notifiable Hazardous Sites
- Trunk, A Roads and Rail Lines. There is a national policy presumption against new junctions onto Trunk Roads and developers will be required to justify setting this aside.
- Trunk Water Mains and Water Catchment Areas
- Land with possible contamination issues (Where the past history of land-use/management indicates that contamination may have occurred, developers will be required to undertake a risk assessment to establish the level of contamination if any; provide an assessment of the impact of contamination including any contaminant migration and effect on the water environment together with provisions for treatment/amelioration; and decontaminate the site before any unit is occupied.)

⁵ See www.highland.gov.uk for information on existing and proposed windfarms in the Highlands.

5.[11-13] Species and Habitats**5.[11-13] Gnèithean is Àrainnean**

5.[11-13].1 Certain species are protected under European and/or UK law and their presence on or near a development site will require consideration. Similarly, certain habitats are a general development consideration.

5.[11-13].2 Article 10 Features of the Habitats Directive include for example, rivers and burns, loch and ponds, wetlands, hedgerows and other traditional field boundaries, areas of woodland and coastal habitats.

5.[11-13].3 Sources for further information on the habitats and species protected, where available, are given in footnotes.

Policy 11 Protected Species

Where there is good reason to believe that a protected species is present on site or may be affected by a proposed development, we will require a survey to be carried out to establish any such presence before determining the application.

Development that is likely to have an adverse effect on European Protected Species (see Glossary) will only be permitted where:

- There is no satisfactory alternative; and
- Development is required for preserving public health or public safety or other imperative reasons of overriding public interest including those of a social or economic nature and beneficial consequences of primary importance for the environment; and
- Development will not be detrimental to the maintenance of the population of the species concerned at a favourable conservation status in their natural range.

Development that is likely to have an adverse effect on protected bird species (see Glossary) will only be permitted where:

- There is no other satisfactory solution; and
- Development is required in the interests of public health or public safety.

Development that is likely to have an adverse effect on other protected animals and plants (see Glossary) will only be permitted where the development is required for preserving public health or public safety.

Policy 12 Other Important Species

Development proposals should avoid adverse effects on the following species if not protected by other legislation or by nature conservation site designations:

- Species listed in Annexes II and V of the EC Habitats Directive
- Priority species listed in the UK⁸ and Local⁹ Biodiversity Action Plans
- Species of principal importance included on the Scottish Biodiversity List¹⁰
- Badgers under the Protection of Badgers Act 1992

We will use conditions and agreements to ensure that harm to these species is avoided.

Policy 13 Important Habitats

We will seek to safeguard the integrity of features of the landscape which are of major importance because of their linear and continuous structure or combination as habitat “stepping stones” for the movement of wild fauna and flora. (Article 10 Features).

We will consider the value of the following Other Important Habitats, where not protected by nature conservation site designations, in the assessment of any development proposal which may affect them:

- Habitats listed in Annex I of the EC Habitats Directive
- Habitats of protected bird species (see Glossary)
- Priority habitats listed in the UK¹¹ and Local¹² Biodiversity Action Plans
- Habitats of principal importance included on the Scottish Biodiversity List¹³

We will use conditions and agreements to ensure that significant harm to the ecological function and integrity of Article 10 Features and Other Habitats is avoided. Where we judge that the reasons in favour of a development clearly outweigh the desirability of retaining those important habitats, we will seek satisfactory mitigation measures including compensatory habitat creation or enhancement of retained habitat and which, in the case of Article 10 Features, allows for continued movement of wild fauna and flora. The Council will also support, where appropriate, opportunities to create new habitat areas through development.

5.14 Surface Water Drainage

5.14 Drèanadh Uisge Uachdarach

5.14.1 Localised flooding can be caused or worsened by inadequate surface water drainage arrangements in new developments. Sustainable Drainage Systems provide control over quality and quantity of surface water drainage and provide opportunities for amenity and ecological enhancement. Best practice can be encouraged by a general policy requirement, cross-referenced to the latest CIRIA document on the subject of Sustainable Drainage Systems, namely "The SuDS Manual" (2007) and to Scottish Water's Technical Manual "Sewers for Scotland 2". Development proposals must also include the making of agreements for the on-going maintenance of surface water drainage systems. Where we are aware of existing poor surface water drainage where development is proposed, we will seek net betterment through the development. Where there are existing watercourses within the site we will be seeking the retention and integration of these as natural features within the development. The following documents are relevant to this policy: Scottish Planning Policy; The SuDS Manual (CIRIA C697); Sewers for Scotland Manual 2nd Edition; PAN 69.

Policy 14 Surface Water Drainage

All proposed development must be drained by Sustainable Drainage Systems (SuDS) designed in accordance with The CIRIA SuDS Manual and, where appropriate, the Sewers for Scotland Manual 2nd Edition. Planning applications should be submitted with information in accordance with PAN 69 paragraphs 23 and 24.

5.15 Developer Contributions

5.15 Tabhartasan Luchd-leasachaidh

5.15.1 It is necessary and appropriate to mitigate the impact of new development. Existing deficiencies in public services, facilities or infrastructure can be made worse by new building and new deficiencies created. The principle of proportionate developer contributions is underpinned by the general policy below and may be secured through a Section 75 Agreement where necessary.

5.15.2 The Council is moving towards a position where its Local Plans will provide specific information on the anticipated deficiencies to be met and mitigation to be provided through developments. We have specified deficiencies under the "developer requirements" for the proposals in this Plan but others may emerge during the consideration of planning applications. Applicants for planning permission should therefore discuss these matters with the Council prior to submission of their applications for specific development proposals.

5.15.3 The following are examples of issues for which developer contributions may be sought (this is not an exclusive list) and a broad indication of how need will be assessed:

Potential Developer Contributions

Education and library provision	The effect of the development on secondary, primary and nursery school capacity and public library provision.
Healthcare facilities	Whether a development will have an effect on the relevant NHS trusts facilities considered to be 'under pressure' by the NHS.
Recycling facilities & waste management	The effect of the development on existing recycling facilities.
Transportation	The effect of the development on transport and infrastructure assessed against the relevant Local Transport Strategy.
Infrastructure	The need for improvement of road, water and sewerage infrastructure.
Community facilities including Care in the Community	The effect of the development on existing community facilities and whether the development will increase the burden on care services.
Strategic landscaping, open space and outdoor access	The need for new or enhanced strategic landscaping, open space (including play areas) or outdoor access nearby taking account of the Core Path Plan.
Sports facilities	The effect of the development on demand for facilities and the unmet demand in the settlements nearby.

Policy 15 Developer Contributions

The Council will seek appropriate developer contributions in association with development proposals emerging from partnership activity, from the development plan process and from planning applications. This will be proportionate to the scale, nature, impact and planning purposes associated with the development, and may be in addition to contributions made by a developer as part of an Affordable Housing agreement. Where public signage is to be provided as part of a development, the Council will encourage bilingual provision.

5.16 Housing in the Countryside

5.16 Taigheadas air an Dùthaich

5.16.1 This policy is necessary in order to conform to Structure Plan Policy H3 and in particular the part dealing with housing development within the hinterland of towns where there is generally tighter restraint than in other parts of the countryside. The policy sets out exceptions and further information about these is available in the Council's most recent "Housing in the Countryside" Interim Supplementary Guidance. In the case of Sutherland, a hinterland area is identified around Tain which extends into the Plan area. The boundary has been refined, protecting countryside areas subject to commuter housing pressures and is defined on the Proposals Map of the Local Plan.

5.16.2 Limited potential for development has been identified at Evelix (up to 6 units) where there are opportunities for suitably sited and designed houses to consolidate the existing grouping, subject to the adequacy of services and infrastructure. Outwith this area potential relates only to proposals that meet with the exceptions indicated in the policy or which otherwise comply with the most recent Interim SG. Like the Interim SG, this policy also seeks to reflect Structure Plan Policy H2 dealing with new settlements.

5.16.3 This policy should be read in conjunction with all other relevant policies of the Plan and PAN 72 Housing in the Countryside; it is particularly important to highlight that general Policies 3, 4 and 16 are related and should be read together.

Policy 16 Housing in the Countryside

The Council will presume against housing in the open countryside of hinterland around towns as defined within the Local Plan (see Glossary, Proposals Map, Structure Plan Policy H3: Housing in the Countryside and the approved Interim Supplementary Guidance). Exceptions to the policy will only be made where at least one of the following apply:

- A house is essential for land management or family purposes related to the management of the land (retired farmers and their spouses);
- Affordable housing is required to meet a demonstrable local affordable housing need;
- Housing is essential in association with an existing or new rural business;
- The house proposed is a replacement of an existing dwelling which does not meet the requirements for modern living and where the costs of upgrading are not justified on economic or environmental grounds (subject to the existing dwellings being demolished);
- The proposal involves conversion or reuse of traditional buildings or the redevelopment of derelict land;
- The proposal forms part of a comprehensively planned new settlement which meets the criteria set out in Structure Plan Policy H2 "New settlements". However, in the Sutherland Local Plan area this will only take the form of new crofting townships.

Where exceptions are justified, all proposals should accord with the general policies of the Plan, and indicate suitable drainage and other servicing, avoid conflict with natural, built and cultural heritage interests including locally important croft land and hazards, and be suitably sited and designed [Structure Plan Policy G2].

In the open countryside outwith the hinterland of towns, we will assess proposals in the context of Policy 3 Wider Countryside and, in the case of proposals which form part of a comprehensively planned new settlement, will support them if they meet the criteria set out in Structure Plan Policy H2 "New settlements". However, in the Sutherland Local Plan area the development of new settlements will only take the form of new crofting townships.

5.17 Commerce

5.17 Malairt

5.17.1 This policy will provide a context for consideration of retail developments within the Plan area. It is intended to support existing centres of settlements in providing for a range of commercial and leisure needs of the wider community. This will help in the retention of services and facilities which serve both the settlement and the wider rural area. The policy also seeks to apply a sequential approach to site identification and to follow the approach advocated in Scottish Planning Policy.

Policy 17 Commerce

The Council will encourage retail, office, and leisure development (Use Classes 1-3, 7, 10 & 11), within the following network of centres.

Hierarchy / Scale	Centre(s)	Function/Role
Sub-Regional/ Town Centre	No centres of sub-regional status present but the central area of GOLSPIE may be regarded as a 'Town Centre' location.	Mixed use Comparison & Convenience
Sub-Area Centre	<ul style="list-style-type: none"> • Dornoch • Brora • Lairg • Bonar Bridge/ Ardgay • Helmsdale • Lochinver • Bettyhill • Kinlochbervie • Durness • Melness/Tongue • Scourie 	Mixed use Comparison & Convenience
Villages	Various	Local shop

[Specific opportunities for land assembly / redevelopment are allocated within the relevant settlement sections.]

Outwith the above centres, proposals will be judged against the following criteria:

- its compliance with the sequential approach to site identification;
- its accessibility by means of public transport, walking and cycling;
- its impact, including any cumulative impact, on the vitality and viability of a centre defined in a Highland development plan;
- its fit with the aim of creating a retail hierarchy in which travel is minimised;
- whether the type and scale of development proposed can reasonably be accommodated within a centre defined in the Plan;
- the extent to which the proposals meet with identified deficiencies;
- whether any developer funded mitigation of the above is offered.

5.18 Design Quality and Place-Making

5.18 Càileachd Dealbhaidh is Dèanamh Àiteachan

5.18.1 This policy seeks a high quality of design in development within the Plan area and the creation of high quality environments in which people can live and work. It responds to the place-making agenda by reflecting the drive of a wide range of Scottish Government policy and guidance which is usefully referenced in the 'easy-read' guide "Design Snapshot" (2007) and includes, for example PAN67 "Housing Quality", PAN68 "Design Statements", "Designing Places: A Policy Statement for Scotland" and other key documents.

Policy 18 Design Quality and Place-Making

New development should be designed to make a positive contribution to the architectural and visual quality of the place in which it is located. Applicants should demonstrate sensitivity and respect towards local distinctiveness of architecture and design in their proposals.

Where relevant we will judge proposals in terms of their contribution to place-making. They should have regard to the historic pattern of development and open space in the locality and should, where relevant, be an integral part of the settlement. We will examine proposals to ensure that people may move safely and conveniently within the development and, where appropriate, to facilities in other parts of the settlement. Proposals will also be examined in terms of their creation of attractive and effective streetscapes and other open space.

5.19 Travel

5.19 Siubhal

5.19.1 The Plan highlights the importance of supporting sustainable development. A key component is that development should be located and designed in such a way that, wherever possible, the need to travel is reduced and people have a choice of sustainable modes of travel between the main places where they might reside, work, shop, learn and do leisure activities. In particular, careful design can create places that are attractive and convenient for people and can significantly improve ease of access by non car modes, for example through the use/ implementation of 'Home Zones' and 'Safer Routes to School'. High quality infrastructure is important in attracting people to use alternatives to the car.

5.19.2 Given the rural nature of the Plan area, significant use of the private car can be expected to continue for many trips, particularly in the more remote and sparsely populated areas or where the population is highly dispersed. Nevertheless, through careful consideration of development proposals a greater level of sustainability can be achieved in new development in the Plan area overall, supporting sustainable travel modes. Opportunities may be taken through this to bring about accessibility improvements of wider benefit to communities, helping in their economic and social development.

5.19.3 Regard will be had to Local and Regional Transport Strategies, national transport policies and priorities and relevant guidelines produced by the Council in implementing the Plan.

Policy 19 Travel

Development proposals that involve travel generation must include sufficient information with the application to enable the Council to consider any likely on- and off- site transport implications of the development and should:

1. be well served by the most sustainable modes of travel available in the locality from the outset, providing choice of mode wherever possible, having regard to key travel desire lines;
2. be designed for the safety and convenience of all potential users;
3. incorporate appropriate mitigation on site and/or off site, provided through developer contributions where necessary, which might include improvements and enhancements to the walking/ cycling network and public transport services, road improvements and new roads;
4. incorporate an appropriate level of parking provision, having regard to the travel modes and services which will be available and key travel desire lines and to the maximum parking standards laid out in Scottish Planning Policy or those set by the Council.

The Council may seek the implementation and monitoring of Travel Plans in support of significant travel generating developments.

Where site masterplans are prepared, they should include consideration of the impact of proposals on the transport network.

In assessing development proposals the Council will also have regard to any implications arising from the Core Path Plan, which will be a material consideration.
