- All dimensions in millimeters unless otherwise stated.
- Foundations shown in this drawing are indicative only. Foundations will be designed on a case-by-case basis, considering sign face areas, ground conditions and location of signs. The type and size of foundations for permanent traffic signs shall comply with SHW Clause 1203. All excavations for foundations shall be carried out in compliance with SHW Clause 604 and shall be cleared of all loose material before placing of concrete and backfilling.
- The proposed location of the signs will be so that, whilst serving their purpose, they do not create a hazard by obscuring visibility or creating a physical obstruction. In addition, future maintenance requirements need to be considered, such as landscaping that can, itself, obscure a street nameplate.
- Signs will be designed to comply with the current version of the *TSRGD*, the *TSM* and *BS EN12899-1:2007 - Fixed Vertical Road Traffic Signs* and also the relevant current parts of *BS 8442 - Road Traffic Signs and Internally Illuminated Bollards*. Materials used for the manufacture of sign faces and associated poles must meet the relevant standards required by the Council.
- Posts for permanent traffic signs shall comply with SHW Cl 1204. Traffic sign posts, with their plates, will be designed to withstand a wind pressure of 15 millibars, equating to 156kg/m².
- All proposed sign designs must be checked by The Highland Council's Gaelic Senior Translator prior to the manufacture and erection of signs.
